## POST CT AND SIMPSON PL SEWER REPLACEMENTS

Dear Residents:

The City of Santa Rosa is finalizing construction plans to replace the existing sewer system in two locations around the City. The existing 6" sewer lines require frequent cleaning, which is breaking down the pipe material. These aging lines will be replaced by new 8" sewer main and new sewer laterals. The project is anticipated to start construction in the summer of 2017 (see reverse for Project Limits).

Completion of this project is vital to the integrity of our community infrastructure. Some of the benefits this project will bring to your neighborhood include:

- Upgraded pipe materials to help improve the sewer and water system's performance.
- New sewer lines to (1) reduce the potential for blockages due to tree root intrusion and significantly reduce the need for repairs, and (2) reduce groundwater infiltration into the sewer system, which helps maintain the effectiveness of our Wastewater Treatment Plant.

Though temporary impacts to your neighborhood are inevitable, our goal is to improve our community infrastructure without creating any more disturbance than necessary. The Contractor will be advised that daily and weekly activities such as mail delivery and garbage service must continue during the project. Please feel free to contact me at 707-543-3878 (or e-mail at [jtilles@srcity.org](mailto:jtilles@srcity.org)) if you have any questions or concerns.

We will update you with another letter approximately two weeks prior to the start of construction. In addition to written communications like this, the City has a special website where you can track the progress of this project. Simply go to [www.srcity.org/CIP](http://www.srcity.org/CIP), view the map, and click on the blue map pin that corresponds to this project. You can also view the list of all Capital Improvement Program projects and find this project under Project ID No: 02081.

Sincerely,

JILLIAN TILLES  
Associate Civil Engineer
