**Professional Certification**

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the Property. We have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Appendix E – EDR Certified Sanborn Map Report
Appendix F – EDR Historical Topo Map Report
Appendix G – EDR City Directory Abstract Report
Appendix H - User Questionnaire
Appendix I – Professional Qualifications

# 1.0 INTRODUCTION

The following report presents the findings of a Phase I Environmental Site Assessment (ESA) performed by EBA Engineering (EBA) for the City of Santa Rosa Pierson Street Rehabilitation Project located in Santa Rosa, California. The project area includes a portion of Pierson Street from Santa Rosa Creek to Third Street in which the entire corridor (sidewalks, roadway, utilities, etc.) is proposed for rehabilitation/improvement by the City of Santa Rosa. Since the project area includes the Pierson Street roadway within the incorporated area of the City of Santa Rosa, there are no addresses or Assessor's Parcel Numbers associated with the project area. Hereinafter the project area will be referred to as the subject property. The subject property is located as shown on the attached Figure 1, Location Map in Appendix A.

This ESA was completed for Brelje & Race Consulting Engineers (Client and User) in conformance with American Society of Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-21).

## 1.1 Purpose

The purpose of this environmental site investigation is to assess the possible contamination of the subject property with hazardous or toxic substances or wastes. A site may contain these substances or wastes as a result of current or past site activities, unauthorized dumping or disposal, or migration of contaminants from adjacent or nearby properties.

The Client should be aware that strict interpretation of California and federal legislation and case law may hold the landowner responsible for any toxic liability including future cleanup costs and, potentially, historical assessments and remediation work on the subject property. Such a statement is not motivated by any condition of the subject property but is a general observation of the advisability that property owners and purchasers exercise all appropriate diligence and alertness to hazardous material risks.

This report is not intended to provide the necessary level of detail to be utilized for structural demolition/remodeling or soil or groundwater remediation. For such activities, appropriate regulations should be followed to ensure adequate coverage of material handling, worker and employee safety, airborne contamination during construction, and the precise extent of any contamination for contractor directions. This report conforms to American Society of Testing and Materials (ASTM) Standard E1527-21 for Phase I Environmental Site Assessments.

In defining a standard of good commercial and customary practice for conducting an environmental site assessment, the goal of the processes established by this practice is to identify recognized environmental conditions, historical recognized environmental conditions and controlled recognized environmental conditions. The term recognized environmental condition (REC) refers to the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under

conditions that pose a material threat of a future release to the environment. The term historical recognized environmental condition (HREC) refers to a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition. The term controlled recognized environmental condition (CREC) refers to a past release of a hazardous substance or petroleum hydrocarbons that has occurred in connection to the property and has been addressed to the satisfaction of applicable regulatory agencies and allowed to remain in place subject to the implementation of required controls. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

By performing a Phase I ESA of a parcel of real estate with respect to the range of contaminants within the scope of the CERCLA (42 U.S.C. §9601) and petroleum products, a user satisfies one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability.

## 1.2 Scope of Services

The scope of services performed was in general accordance with the scope and limitations of ASTM's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-21) and included records review, research of historical records, interviews with past and present owners and occupants, interviews with state and/or local government officials, a site reconnaissance, and an analysis of the subject property's physical setting.

To determine the condition of the subject property with respect to environmental liability, EBA performed the following tasks:

- Reviewed past and current land use for indications of the manufacture, generation, use, storage, and/or disposal of hazardous substances.

- Evaluated the potential for on-site soil and/or groundwater contamination resulting from past and present subject property land use activities and, to the extent possible, adjacent off-site operations.

- Rendered findings and professional opinions regarding the potential for environmental contamination at the subject property; and

- Recommend and perform further investigations (i.e., Phase II ESA), if deemed appropriate to evaluate whether contamination and/or environmental hazards exist at the locations identified.

## 1.3 Significant Assumptions

The following significant assumptions were made:

- All known and relevant information, knowledge, and experience have been provided by the User.

- Reasonably ascertainable records available from publicly available sources were used for the assessment of the subject property. We assume the records used in our research are reliable.

## 1.4 User Reliance

This Phase I ESA documents the results and conclusions regarding the potential for site impairment by hazardous substances generated, used, or stored on the subject property and within the immediate vicinity of the subject property. This report has been prepared solely for the Client and any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties, or representations, expressed or implied in this report, are made to any such third party.

Please note pursuant to Section 4.6 of the *ASTM Standard E1527-21 for Phase I Environmental Site Assessments,* this report is valid for 180 days from the date noted herein.

## 1.5 Limitations and Exceptions

Local, State, and Federal environmental regulations and property conditions can vary significantly over time. Consequently, the conclusions and recommendations presented as a result of this environmental site assessment apply strictly to the environmental regulations and property conditions existing at the time EBA performed this study. EBA assumes that the data obtained, and the inferences made during this investigation are reasonable and representative of the property.

EBA makes no warranty, expressed or implied, except that our services have been performed in accordance with generally accepted existing environmental engineering, health and safety principles, and applicable regulations at the time and location of the study. EBA has analyzed the available information using currently applicable engineering techniques.

Please be advised that the recommendations presented herein are based solely on information made available to EBA by others, and includes professional interpretations based on limited research and data. Based on these circumstances, the decision to conduct additional investigative work to substantiate the findings and conclusions presented herein is the sole responsibility of the Client.

No Exceptions or Deviations occurred from the ASTM Standard.

# 2.0 SITE DESCRIPTION

## 2.1 Location and Legal Description

The project includes a portion of Pierson Street from Santa Rosa Creek to Third Street in which the entire corridor (sidewalks, roadway, utilities, etc.) is proposed for rehabilitation/improvement by the City of Santa Rosa, California that is located as shown on Figure 1 in Appendix A. The subject property has no legal property or property parcels of boundaries and for the purposes of this assessment the description of the subject property is that segment of Pierson Street shown on the attached Figures 2 and 3 in Appendix A. Site photographs depicting current subject property conditions and land use in the vicinity are included in Appendix B.

## 2.2 Current Use of Property

The subject property currently consists of the established Pierson Street roadway within the incorporated area of downtown Santa Rosa.

## 2.3 Current Uses of Adjoining Properties

The subject property consists of that portion of Pierson Street discussed herein that is immediately surrounding primarily by residential properties. Commercial properties are located along the Third Street corridor to the south and within the historical Railroad Square to the east.

## 2.4 Site and Vicinity General Characteristics

The subject property is located in a developed mixed-use area of downtown Santa Rosa with primarily residential properties within the immediate area of the subject property and commercial development concentrated to the south along the Third Street corridor and to the east in the area of the historic Railroad Square. t

Photographs depicting the subject property and site vicinity conditions are included in Appendix B.

## 2.5 Physical Setting

The subject property is located within the incorporated area of downtown Santa Rosa, California and includes an approximately 700-foot length segment of Pierson Street extending from Santa Rosa Creek to Third Street. Topography at the subject property is relatively flat with an approximate average surface elevation of 150 feet above mean sea level. Santa Rosa Creek flows westerly underneath Pierson Street near the northern extents of the subject property.

The following physical setting sources were utilized:

- Geology of Northern California, California Division of Mines and Geology – Bulletin 118.
- California's Groundwater Bulletin 118, Santa Rosa Valley Groundwater Basin, 2004.

- Geology and Groundwater in Russian River Valley Areas and in Round, Laytonville and Little Lake Valleys, Sonoma and Mendocino Counties, California, US Department of Interior, 1965.
- United States Geological Survey – Hydrologic and Geochemical Characterization of Santa Rosa Plain Watershed, Sonoma County, California. Scientific Investigations Report 2013-5118. 2013.
- Jennings, C.W., Gutierrez, C., Bryant, W., Saucedo, G., and Wills, C., 2010, Geologic map of California, California Geological Survey, Geologic Data Map 2, 1:750,000.
- U.S. Geological Survey. Santa Rosa, 7.5 Minute Topographic Quadrangle.
- FEMA's National Flood Hazard Layer (NFHL) Viewer.
- Google Earth.

An Aerial Location Map for the subject property is included as Figure 3 in Appendix A.

### 2.5.1 Local Geology and Soils

The subject property is located within the Coast Range Geomorphic Province of northern California. The Coast Range Geomorphic Province is generally characterized as a series of northwest trending elongated ridges and valleys that are a result of folding and faulting. The province includes many separate ranges, coalescing mountain masses, and several major structural valleys. The regional structure of the Coast Range is considered to be a number of independent fault blocks with different stratigraphic and structural histories.

The subject property is located within the Santa Rosa Plain, which consists of alluvial fan deposits of Pleistocene and Holocene age. The alluvial fan deposits form a nearly continuous blanket over the Santa Rosa Plain and consist of poorly sorted coarse sand and gravel, moderately sorted fine sand and silt, and silty clay. The subject property has been mapped as having basement materials that underlie the alluvial fan deposits that consist of marine sedimentary rocks of the Miocene Age Wilson Grove Formation. Portions of these rocks may be covered by younger continental sedimentary rocks of the Pliocene-Pleistocene Age Glen Ellen Formation.

### 2.5.2 Hydrogeology

The subject property lies within the Santa Rosa Valley, Santa Rosa Plain Groundwater Sub-Basin. The Subbasin is drained primarily to the west by the Santa Rosa and Mark West Creeks, which flow into the Laguna de Santa Rosa. The Laguna de Santa Rosa, in turn, flows in a northerly direction towards the western-flowing Russian River which flows westerly to the Pacific Ocean. The principal water-bearing deposits of the Plain consist of the Glen Ellen Formation and the younger alluvium. The stratigraphy of the Glen Ellen Formation and younger alluvium is typically composed of lenticular sand units interspersed in fine-grained silts and clays. Groundwater in both deposits is generally unconfined or semi-confined.

Based on regional topography and a review of groundwater flow data from past environmental activities performed at regulated properties in the subject property vicinity, groundwater beneath the subject property is expected to flow to the west-southwest

generally following the flow of Santa Rosa Creek. Depth to groundwater in the area of the subject property has been reported to seasonally fluctuate between approximately five to 15 feet below ground surface (bgs). Please note that groundwater depths and flow direction have been demonstrated to be influenced by local topography and drainage courses and that groundwater levels have been observed to vary seasonally.

### 2.5.3 Flood Zone Map

A review of the applicable Flood Insurance Rate Maps published by the Federal Emergency Management Agency (06097C0736F) indicates the subject property is not located within a 100-year floodplain or floodway.

### 2.5.4 MS4 Stormwater Permitting Area

The subject property is located within the City of Santa Rosa Municipal Separate Storm Sewer Service (MS4) permitting area. Enhanced stormwater management requirements can apply within MS4 areas for land uses.

# 3.0 HISTORICAL INFORMATION

## 3.1 Historical Summary

Available historical records, including aerial photographs, indicate that the area of the subject property was a large orchard circa 1893 before the Pierson Street roadway was constructed in 1904 and development of surrounding lands with residences began. The subject property has remained in use as the Pierson Street roadway to the present day.

The history of the subject property is generally well documented without any significant data gaps.

## 3.2 Historical Aerial Photographs

Historical aerial photographs were obtained from EDR for the years 1942, 1952, 1957, 1968, 1973, 1982, 1985, 1993, 2006, 2009, 2012, 2016, 2020, and 2024. Aerial photographs can indicate changes in land use of a site over time. The following presents our findings from a review of the available aerial photographs.

*Historical Aerial Photographs – City of Santa Rosa Pierson Street Rehabilitation Project*

| Photo Date | Scale | Description |
|---|---|---|
| 1942 | 1" = 500' | In the 1942 photograph the subject property is visible as a roadway. Surrounding lands are indicated to be in residential use with properties in agricultural uses visible farther to the west, and commercial properties to the east within the historic Railroad Square. |
| 1952 | 1" = 500' | The 1952 aerial photograph indicates no obvious or significant changes to the subject property or surrounding lands from that shown in 1942. |
| 1957 | 1' = 500' | The 1957 aerial photograph indicates no obvious or significant changes to the subject property or surrounding lands from that shown in 1952. |
| 1968 | 1" = 500' | The 1968 aerial photograph indicates no obvious or significant changes to the subject property or surrounding lands from that shown in 1957 with the exception that an increase in commercial development to the south and southeast along the Third Street corridor is apparent and Highway 12 is now present to the south. |

| Photo Date | Scale | Description |
|---|---|---|
| 1973 | 1’ = 500’ | The 1973 aerial photograph indicates no obvious or significant changes to the subject property or surrounding lands from that shown in 1968 with the exception that Santa Rosa Creek has been channelized and vegetation removed from the riparian corridor, Third Street has been re-aligned, and a continued increase in the density of development of surrounding lands is apparent. |
| 1982 | 1” = 500’ | The 1982 photograph is an infrared photograph that indicates no significant or obvious changes to the subject property or surrounding lands from the 1973 photograph with the exception of a continued increase in commercial development is apparent to the east and southeast of the subject property, and Dutton Avenue has been extended to the west. |
| 1985 | 1” = 500’ | The 1985 photograph is an infrared photograph that indicates no significant or obvious changes to the subject property or surrounding lands from the 1982 photograph. |
| 1993 | 1” = 500’ | The 1993 aerial photograph indicates no obvious or significant changes to the subject property or surrounding lands from that shown in 1985. |
| 2006 | 1” = 500’ | The 2006 photograph indicates no significant or obvious changes to the subject property or adjacent properties from the 1993 photograph. |
| 2009 | 1” = 500’ | The 2009 photograph indicates no significant or obvious changes to the subject property or adjacent properties from the 2006 photograph. |
| 2012 | 1” = 500’ | The 2012 photograph indicates no significant or obvious changes to the subject property or adjacent properties from the 2009 photograph. |
| 2016 | 1’ = 500’ | The 2016 photograph indicates no significant or obvious changes to the subject property or adjacent properties from the 2012 photograph. |
| 2020 | 1” = 500’ | The 2020 photograph indicates no significant or obvious changes to the subject property or adjacent properties from the 2016 photograph. |
| 2024 | 1” = 500’ | The 2024 photograph indicates no significant or obvious changes to the subject property or adjacent properties from the 2020 photograph. |

Copies of the historical aerial photographs are provided in the EDR Aerial Photo Decade Package, dated February 4, 2026, are included in Appendix D.

Additional aerial photographs were obtained from the City of Santa Rosa Geographic Information System (GIS) for the years 1953, 1963, 1973, 1977, 1987, 1991, 2001, 2005, 2007, 2011, 2013, 2015, 2018, 2020, 2022, and 2025, which were used to supplement historical observations where applicable.

Aerial photographs available on the Santa Rosa GIS website can be accessed at:

https://maps.srcity.org/Html5Viewer/Index.html?viewer=AerialViewer&Center=6375999,1920000

### 3.3 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas but are now utilized as a valuable source of historical and environmental risk information. EDR owns the largest collection of Sanborn Fire Insurance Maps (Sanborn Maps). The results of EDR’s search for historical Sanborn Maps of the site and/or area provided in the Sanborn Map Report, dated February 4, 2026, indicate Sanborn Maps from 1885, 1888, 1893, 1904, 1908, 1950, and 1969. The Sanborn Map Report is included in Appendix E.

The Sanborn Maps from 1885, 1888, and 1893 indicate the subject property and adjacent properties consist of an orchard and Pierson Street does not yet appear to have been constructed. By the time of the 1904 Sanborn Map Pierson Street has been constructed and the orchards appear to have been razed and replaced with several residences. By the time of the 1950 Sanborn Map a majority of the lots along Pierson Street have been developed with residences with no significant changes indicated in the 1969 Sanborn Map.

The Sanborn Maps generally corroborate the historical use of the subject property and surrounding lands.

### 3.4 Historical Topographic Maps

The results of EDR's search for historical topographic maps for the subject property and/or area is provided in the Historical Topographic Map report, dated February 4, 2026. Topographic maps from the Santa Rosa and Sebastopol 7.5- and 15-minute Quadrangles dating from 1916, 1944, 1954, 1968, 1973, 1980, 1998, 2012, 2015, 2018 and 2021 were provided. Information ascertained from completed maps and/or mapped portions generally corroborate the use of the subject property and surrounding properties obtained from other historical sources. The topographic maps generally corroborate the historical use of the subject property as being in agricultural uses until the early 1900s when Pierson Street was constructed and surrounding lands being developed primarily for residential uses. Copies of the topographic maps are included in Appendix F.

### 3.5 City Directories

The results of EDR's search of published City Directories are presented in the City Directory Abstract, dated February 4, 2026. The City Directories provide occupancy information for the subject property vicinity from 1930 to 2022. The City Directories corroborate historical uses of the subject property consisting primarily of the roadway discussed herein. A copy of the City Directory Abstract is included in Appendix G.

### 3.6 Recorded Land Title Records

Based on EBA's review of available recorded land title records, the subject property is owned by the City of Santa Rosa.

### 3.7 Historical Use Information for Adjoining Properties

Historical research was ascertained for adjoining properties by reviewing the historical documents referenced above.

## 4.0 REGULATORY RECORDS REVIEW

### 4.1 Standard Environmental Record Sources

EBA contracted EDR to conduct a comprehensive Federal, State, and local environmental records search for the subject property and properties within a one-mile radius of the subject property boundary. The purpose of the database search was to identify potential exposure to the subject property from various environmental concerns and/or hazardous materials releases. The Environmental Record Search (ERS) consists of a map showing the location of the identified sites relative to the subject property, a summary listing the identified sites

by street names, and a final report describing the sources investigated and the resulting findings. It should be noted that the findings are those noted on the regulatory database(s) and that accuracy and completeness of record information varies among information sources, including government sources. The ERS findings are supplemented by interviews with owners/occupants/employees, and local government officials, as necessary. Agency records review and historical data review are also used to ascertain the potential environmental significance of sites reported in the ERS. In some instances, to avoid an exhaustive discussion of the numerous sites identified by EDR, the facilities are discussed together, and conclusions consolidated. The lists of the databases accessed and reviewed includes but is not necessarily limited to those listed in the attached EDR Radius Map Report, dated February 4, 2026. Results of the record search are presented in Appendix C and the database search results are discussed in the following sections.

### 4.1.1 The Subject Property

The subject property is not identified in any regulatory agency databases and files as a regulated facility with the exception of one listing on the CA CHMIRS database. This database listing is associated with a reported water-main break from an area residence in 2011 that reportedly released 10,000-gallons of water to Santa Rosa Creek. Repairs were subsequently made to the water-main and this incident resolved. This incident is not seen as an environmental concern.

There is no indication of the use, storage or disposal of hazardous materials or wastes at the subject property. Lastly, there is no indication of the current or historical use of underground fuel storage tanks or dump sites at the subject property.

### 4.1.2 Relevant Record Listings for Surrounding Properties

The EDR records search identified numerous offsite environmentally regulated facilities within the requested search radii of the subject property, many of which are leaking underground storage tank (LUST) and Cleanup Program Site (CPS) facilities. Of the EDR database listings, the LUST and CPS listings typically pose the greatest threat of an impact as these database listings are the result of an unauthorized release of hazardous chemicals to the environment.

The EDR records search also identified several properties within the requested search radii of the subject property as currently or having historically operated underground fuel storage tanks (USTs) and/or documented releases of hazardous substances. These databases include the SWEEPS UST (Statewide Environmental Evaluation and Planning System), HIST UST (Historical UST Registered Database), CERS Tanks (list of sites in the California Environmental Protection Agency Regulated Site Portal), and CA FID UST (this Facility Inventory Database contains active and inactive UST locations) listings. Most of these facilities are also listed on the LUST and/or CPS-SLIC databases.

The facilities which are closest to the subject property, and/or which warrant additional discussion are discussed in detail below.

**SRDPW Third Street Culvert**

The Third Street Culvert site consists of areas investigated to the east of the subject property near the eastern bank of Santa Rosa Creek, and to the southeast of the subject property near the southwestern corner of the intersection of Third Street and Roberts Avenue. In 1965 it is reported that the City of Santa Rosa purchased approximately 20 feet of property located at 2 Third Street for the purpose of widening Third Street. In 1983 the North Coast Regional Water Quality Control Board (NCRWQCB) received complaints of an oily discharge from a culvert into Santa Rosa Creek located to the east across Santa Rosa Creek and near the Cannery at Railroad Square property. A geophysical survey conducted in the area of the City's right-of–way reportedly identified two magnetic anomalies suspect of being a UST adjacent to the frontage of the building at 2 Third Street. In 1995 the City conducted exploratory trenching in the right-of way and did not recover evidence of a suspected UST. From 1997 to 2002 additional investigations were reportedly conducted to determine the location and impact of the suspected UST and no evidence of a UST was identified.

In 2003 the City of Santa Rosa installed a permanent dewatering sump along Santa Rosa Creek where water/liquids from the culvert would collect.

In 2005, 13 borings were reportedly advanced along the east side of Santa Rosa Creek and analytical results indicated the presence of gasoline range organics (GRO), diesel range organics (DRO) and heavy oil range organics (HRO) in soil and groundwater samples collected as part of the investigation. In October 2006, four groundwater-monitoring wells were reportedly installed along the east side of Santa Rosa Creek (MW-3, MW-4, MW-5 and MW-6) and two additional groundwater-monitoring wells (MW-1 and MW-2) were installed along the south side of Third Street. A gauging station was also installed at the Third Street Bridge. The wells were sampled along with groundwater monitoring wells GW-25 and GW-28 located directly south of the Cannery at Railroad Square property. Monitoring wells GW-25 and GW-28 were installed on the south side of the Cannery at Railroad Square property as part of the investigation of the Mead Clark Lumber site located farther to the south across Third Street. In the past these wells had reportedly indicated significant concentrations of petroleum hydrocarbons and fuel related volatile organic compounds (VOCs).

The wells were sampled in November 2006 and indicated the presence of petroleum hydrocarbons consisting primarily of GRO with some heavy range components. The results for groundwater samples collected from the wells has indicated concentrations of GRO up to 7,700 micrograms per liter (µg/L) in MW-2 located in the vicinity of the suspected UST in Third Street, as well as DRO up to 2,100 µg/L and kerosene up to 2,300 µg/L in the remaining monitoring wells. Low levels of fuel related VOCs and chlorinated solvents were also reported. It should be mentioned that the contaminants in groundwater monitoring wells GW-25 and GW-28 had significantly decreased in concentration from sampling that had occurred in 1989. Recommendations were made to perform extended quarterly monitoring of the monitoring wells.

The source of the contamination for the Third Street Culvert was not discovered. The work to identify the source included the completion of a geophysical survey as well as the

installation of exploratory trenches and finally the installation and sampling of groundwater monitoring wells as discussed above.

The site investigation was closed by the NCRWQCB in January 2014. The site was closed with no further remedial work. It is reported that there remains a collection system in place to collect discharges from the culvert.

The work related to the Third Street Culvert indicates that groundwater contamination is present in the vicinity of the southern side of the Cannery at Railroad Square property. However available information indicates that the observed contamination has not been detected within former soil borings and monitoring wells advanced to the west of Santa Rosa Creek. Based on EBA's review of available information, this site is not seen as posing a threat of significant impact to the subject property.

Information regarding the site can be found on the GeoTracker web site at the following links:

https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0609700677
https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0609793106

**Peter Franchetti, 3 & 60 West Third Street (current Cannery at Railroad Square property)**
The database listings for this property are associated with the completion of investigative and remedial activities associated with two USTs that were historically used at the property. This property is located across Santa Rosa Creek approximately 450 feet to the east of the subject property. The following presents information regarding both of the former UST cases.

Both 60 West Sixth Street and 3 West Third Street are listed in regulatory agency files and environmental databases for having completed investigations and cleanup related to leaking USTs. In November 2000, a limited site investigation was performed at the property consisting of the installation of six soil borings advanced in the presumed downgradient direction of a concrete UST discovered in a warehouse at the 3 West Third Street property. Elevated concentrations of petroleum hydrocarbons consisting of DRO and HRO and low concentrations of chlorinated solvents were reportedly detected in groundwater samples collected during the investigation. In contrast, the soil analytical results reportedly did not indicate the presence of petroleum hydrocarbon constituents.

In 2004, the (NCRWQCB requested quarterly monitoring of an existing monitoring well (MW-4) which at that time was located in the former parking lot west of the 60 West Sixth Street property. Monitoring well MW-4 was reportedly installed by the NCRWQCB in the 1990s as part of an unrelated NCRWQCB groundwater investigation in the area of the site.

In October 2004, HRO was reported in one of eight geotechnical soil borings (B-5) that were advanced at the 3 West Third Street property that was installed for the proposed redevelopment of the property. Analytical results of soil samples collected during a subsequent investigation located in the area of boring B-5 reportedly indicated the presence

of significant concentrations of HRO in soil. Analytical results from groundwater samples collected from the soil borings that were advanced in the vicinity of B-5 also reportedly indicated the presence of free product HRO on the first encountered groundwater.

In September 2005, a second UST that was constructed of steel was discovered on the western side of the site during on-site demolition activities.

In October 2005, both the concrete UST and steel UST were removed from the site under regulatory oversite and permitting from the Santa Rosa Fire Department (SRFD) and the NCRWQCB. Analytical results from confirmation soil samples that were collected from beneath the former concrete UST reportedly indicated concentrations of HRO up to 25,000 milligrams per kilogram (mg/kg) present in soil.

Analytical results from the confirmation soil samples collected from the former steel UST area reportedly indicated HRO present at concentrations up to 1,100 mg/kg. Analytical results from groundwater samples collected during the removal of the steel UST indicated significant concentrations of HRO in groundwater in the immediate area of the UST.

From October 2005 to January 2006, 22 soil borings were advanced at the site to assess and define the impacts to soil and groundwater from the former USTs. Soil borings that were advanced in the vicinity of the former concrete UST reportedly indicated the presence of significant concentrations of HRO in soil and groundwater.

Between August and October 2006, excavation activities were reportedly conducted at the site to remove heavy range petroleum hydrocarbons from soil in the vicinity of the steel UST, the concrete UST, and south of the concrete UST towards former geotechnical soil boring B-5. Much of the excavation was performed using a slot trench technique to remove soil and using absorbent pads and limited groundwater pumping to remediate groundwater. These techniques were used due to stability concerns of the existing building walls that remain at the site. A total of approximately 2,155 tons of impacted soil was subsequently removed and transported for disposal to a licensed disposal facility as part of the excavation activities. Analytical results of confirmation soil samples collected at the conclusion of the excavation activities indicated that the excavation activities were generally effective at removing accessible source materials given the site constraints.

Six groundwater-monitoring wells were subsequently reportedly installed at the site that extended from the western edge of the site west towards Santa Rosa Creek. Groundwater monitoring was performed at the site from February 2007 to March 2011. The groundwater monitoring sampling results reportedly indicated generally low concentrations of DRO and HRO that decreased in concentration during the sampling period. In addition, during the final two monitoring events performed, all of the groundwater monitoring wells reported non-detectable concentrations of petroleum hydrocarbons. It should be noted that low concentrations of tetrachloroethene (PCE) was present in groundwater at the site. PCE has been detected in groundwater sampling in the extended area of the site and does not appear to be associated with any releases that have occurred at the property.

The site investigations at the site were closed by the NCRWQCB in a letter dated May 30, 2013. The closure of the site was conducted with some soil contamination remaining in place that was inaccessible due to stability concerns of the existing building walls. As discussed, groundwater at the site was shown to be free of petroleum hydrocarbons during the last two sampling events.

It should be noted that in May 2020 a Soil and Groundwater Management Plan (S&GMP) was prepared and submitted to the NCRWQCB for the proposed development of the property. The S&GMP sets forth protocols and methods for the safe handling, characterization and disposal of soil and groundwater at the site during ground disturbing activities. The S&GMP is now part of the regulatory record for the property.

Based on EBA's review of available information, this site is not seen as posing a threat of significant impact to the subject property.
Archived environmental documentation for the site is available at the following web address:

https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0609792525

**SMART Property – 20 West Third Street, Santa Rosa**
The Sonoma-Marin Area Rail Transit (SMART) property is located across Santa Rosa Creek approximately 650 feet east of the subject property is listed on the LUST and CPS databases. The SMART property is located upgradient of the subject property with respect to groundwater flow and has had several phases of environmental investigation and remediation. The historical use of the property has consisted primarily of a railroad transit yard and servicing station by Northwestern Pacific Railroad from the late 1800's through the early 1960's. Several site structures were historically present on the property that included the main line track system that occupied the eastern side of the property and several associated railroad spurs, warehouses and freight houses, a turntable and several aboveground and below ground fuel and water tanks located throughout the interior portion of the property.

The SMART property is identified in regulatory agency files for the investigation and remediation of several environmental issues. These issues appear to have begun as part of a property assessment performed for the potential sale of the property and started in the late 1980s. Several phases of investigation and remediation have been performed at the site that have been conducted as part of the removal and/or investigation of former USTs, aboveground tanks (AGTs) and surface source areas of contaminated materials at the site. A summary of the investigations conducted at the site to date is as follows:

- Three USTs were removed from the property site in December 1987. The USTs consisted of a 230-gallon fuel oil tank, a 10,000-gallon diesel tank and a 10,000-gallon gasoline tank that were located in the eastern-central portion of the property. It is reported that no observable holes were present in the US's and no detectable hydrocarbons were present in soil samples collected during their removal.

- In April 1988, two groundwater monitoring wells (GW-24 and GW-27) were installed at the property as part of the investigation of the former Mead Clark Lumber Yard

located south of the project site property. Testing of these monitoring wells indicated no detectable levels of petroleum hydrocarbons. However, PCE was detected in one of the monitoring wells. This compound is a chlorinated solvent that is typically associated with dry cleaning facilities.

- In April 1990 two groundwater monitoring wells (RBMW-2 and RBMW-3) were installed by NCRWQCB staff within the property. These wells were installed as part of an investigation to evaluate potential sources of petroleum hydrocarbon impacts to Santa Rosa Creek in the area of the Third Street Bridge to the southwest of the site. The monitoring wells indicated low levels of DRO and PCE in monitoring well MW-3 during one of two sampling events. The monitoring wells were subsequently destroyed in 1995.

- In 1992, five soil borings (B-1 through B-4 and B-6) were installed in the area of the three USTs removed from the property in 1987. Low levels of DRO were detected in one soil boring. In addition, DRO was detected in one of the five groundwater samples collected during the investigation at a concentration of 31,000 µg/L in boring B-6 adjacent to the former 230-gallon fuel oil tank location. All other analytes were below the laboratory detection limit.

- From 1995 to 2001 thirty-three soil borings were installed at the site in various areas to define the extent of impacts to the property from the historical site uses. The areas investigated included a fenced enclosure that existed centrally within the eastern portion of the property and was used for various industrial activities. A 230-gallon UST used to store heating oil was also located within this area. A concrete pad located within the enclosed area was also the location of a shredder that was used to shed wood railroad ties. Regulatory documentation indicated the shedder had extensive oil leaks and impacts to the ground surface and surrounding area. In addition, an AGT was located within the fenced enclosure which also had indications of surface soil impacts. Lastly it was noted that a temporary storage structure was brought into the area for the storage of tools, oil drums and gas cans. The floor of the structure was indicated as being saturated with oil, which seeped out onto the ground.

- Extensive investigative activities were also performed in the northwest area of the property. This area was the historical location of the Santa Rosa Woolen Mills which operated in this area from the late 1800s until it was destroyed by fire in the 1906 earthquake. After this time the area was used by the railroad for various uses including fuel storage and fueling operations. Several structures related to the Woolen Mills including boilers and buried fuel tanks were noted on historical maps. In addition, a 126,000-gallon AGT used for the storage of fuel oil for the railroad was located in this area of the property. Several fuel related structures including a product trench, oil traps and oil columns appear to have been part of the fueling system were also located on this portion of the property. Soil samples collected during this investigation were analyzed for constituents of concern including petroleum hydrocarbons, metals, VOCs and polynuclear aromatic hydrocarbons (PAHs). Results of the sampling indicated significant concentrations of petroleum

hydrocarbons present in specific areas of the site in soil and groundwater that included the area of the fueling structures, the area of the former AGT and the location of a former UST. Impacts to soil were identified as being primarily heavy petroleum hydrocarbons.

- Additional areas of the site that were investigated included the area of the former turntable in the south-central portion of the site and in an area designated as the southern warehouse located on the southwestern portion of the property. Findings from these areas indicated detectable levels of petroleum hydrocarbons in soil in the area of the southern warehouse.

- In September 2000 an additional 13 soil borings were advanced in the northwestern area in and around the fenced area. Analytical results confirmed the presence of methyl tert-butyl ether (MtBE) impacts to groundwater to the eastern and central portions of the site at concentrations up to 77 µg/L. Significant concentrations of heavier petroleum hydrocarbons including DRO and HRO were detected in soil and groundwater from soil borings installed in the northwestern area of the property.

- A limited geophysical investigation was performed in 2001 in the northwest portion of the property in an attempt to locate a suspected UST that was identified on historic site maps. Whereas no apparent UST was discovered, subsurface piping and manifolds were identified that ran north to south through the western side of the property. In June 2002 approximately 300 feet of subsurface piping was removed from the northwestern area of the site. Significant levels of contaminants were detected beneath the pipe.

- In September 2001, five on-site and off-site groundwater monitoring wells were installed to characterize impacts to groundwater at site. A majority of the wells were installed in the area of the former Woolen Mills in the northwest portion of the site. An upgradient well was installed on the eastern portion of the property in the vicinity of the main line railroad tracks.

- From June 2002 to November 2002 an additional 47 soil borings were advanced in the northwestern area and the fenced enclosure. Soil samples collected from the fenced enclosure, the northwestern area and the pipeline trench indicated significant concentrations of DRO and HRO in soil. Proposed remedial options included excavation and removal of accessible impacted soil.

- In October and November 2003, approximately 6,500 cubic yards of impacted soil was removed from several areas of the property. The largest area of excavation corresponded to the northwestern portion of the property where several areas were excavated to remove impacted soil. Source removal activities began in the area of a former wooden UST that is indicated on historical Sanborn maps for the Woolen Mills facility. During the excavation activities, remnants of the former tank were found and removed and excavation proceeded to depths of approximately 18 feet bgs. Significant amounts of free phase hydrocarbons were encountered on the groundwater surface during the excavation activities which were pumped, treated

and disposed of to the sanitary sewer. Approximately 700 cubic yards of materials was removed from this area. The excavation in this area proceeded to within 20 feet of the existing Sixth Street Warehouse and was subsequently stopped due to concerns of stability of the structure.

- Excavation activities in the northwestern portion of the property also included the fuel pipeline product trench which was enlarged as it encountered contaminated materials in an area designated as the main pit excavation area. A total of 3,500 cubic yards of impacted materials were removed from this area. The excavation pit extended to depths of first encountered groundwater at approximately 19 feet below the ground surface. Impacted groundwater was encountered with free phase hydrocarbons present. The groundwater was removed using pumps whereby it was treated and disposed of to the sanitary sewer. Excavation activities were performed below groundwater to a final depth of approximately 22 feet bgs.

- The excavation activities also included the removal of approximately 60 cubic yards of impacted soil from the fenced enclosure in the area of the former AGT, tie shredder, oil storage container and surface spills. Confirmation samples indicated limited concentrations of contaminated source materials containing DRO and elevated lead were left in place in the area of a concrete slab and trailer. Excavation activities were incomplete in this area as site constraints appear to have prevented the full removal of impacted materials.

- Soil excavation was also performed in the southwestern side of the property identified as the southern warehouse area. A total of 270 cubic yards of materials were removed from this area. The excavation of this area appears to have also been somewhat incomplete as contaminants consisting of heavy petroleum hydrocarbons were left in place.

- Additional excavation was also performed on the south side of the product line trench that was encountered in the northwestern area. Approximately 325 cubic yards of impacted soil was removed from this area.

- Additional investigation and source removal was performed in the immediate area of a soil boring (SRB-113) located in the northwestern area of the site. This area had been identified as having elevated levels of petroleum hydrocarbons in soil during the characterization phase. Approximately 500 cubic yards of impacted soil was removed from this area. Confirmation soil samples indicated significant concentrations of DRO and HRO remained in the excavation sidewalls at depth following the completion of the excavation. In addition, as with previous excavations in this area, free phase petroleum hydrocarbons were encountered in groundwater during the excavation that were pumped, treated and disposed.

- Approximately 70,000 gallons of impacted groundwater was collected and subsequently disposed of to the City of Santa Rosa sewer system under a general discharge permit.

- A No Further Action (NFA) letter was issued for the site by the Executive Officer of the NCRWQCB on August 31, 2007. The NFA required the preparation and implementation of a SGMP for construction activities in the event that the property is redeveloped and sets forth procedures that will be used to identify, characterize, handle and potentially dispose of impacted soil and/or groundwater that remain at the site and would likely be encountered during the redevelopment of the property.

- In March 2008 a *Phase I Environmental Site Assessment* was completed by EBA Engineering for the SMART property. The report recommended several additional phases of environmental investigation including the performance of a geophysical survey for the entire property, preliminary assessment of additional suspect areas, advancement of 80 soil borings, and the collection of soil and groundwater samples for chemical analysis.

- The geophysical survey identified several buried anomalies that were further explored by excavation. These activities resulted in the discovery of a UST while investigating a steel pipe that trended east from the northeastern corner of the 3 West Third Street warehouse approximately 50 feet, whereupon it turned towards the north. A second pipe was discovered that trended east-west across the site. The UST was discovered while uncovering this east-west trending pipe. The UST was filled with oil. Given its relatively small size (550 gallons), the UST may have been used for heating oil storage.

- A total of 80 borings were installed within the property for the purpose of collecting soil and groundwater samples for chemical analysis. Analytical results indicate that approximately 23 percent of the soil samples analyzed contained detectable concentrations of DRO and HRO. The DRO concentrations ranged from 15.9 to 4,410 mg/kg, with an average concentration of approximately 860 mg/kg. The HRO concentrations, in turn, ranged from 21.0 to 3,570 mg/kg, with an average concentration of approximately 1,000 mg/kg. The DRO and HRO concentrations typically diminished with depth, and in many cases declined to nondetectable levels in the deeper soil samples. One exception is soil boring SB-1A, located on the northwest side of the property, that exhibited significant petroleum hydrocarbon impacts to a depth of approximately 14 feet BGS. Step-out soil borings (SB-1B, SB-1C, SB-1D, SB-1E and SB-1F) were advanced around SB-1A in a successful effort to define the lateral and vertical extent of impacts in the area.

- A total of 28 soil samples from 16 locations were analyzed for VOCs during the investigation. PCE was the most prevalent of the observed VOCs as exhibited by detections at four of the 16 locations at concentrations ranging from 1.44 to 6.06 micrograms per kilogram (µg/kg).

- Generally low concentrations of petroleum hydrocarbons were detected in groundwater at the property. In regards to VOCs, PCE was detected in 19 of the 25 sampling locations from both shallow (approximately 15 feet BGS) and deep (approximately 25 feet BGS) water-bearing zones. Trichloroethene (TCE) and cis-

1,2-dichloroethene (cis-1,2-DCE), both breakdown products of PCE, were also detected at various locations.

- Based on the results of the additional site characterization the site investigation was reopened by the NCRWQCB who directed that additional work be conducted to further investigate and remediate the property.

- Two additional USTs were removed from the property in November 2011. Obvious soil contamination was present in the area of the USTs and was subsequently removed from the excavation pit. Soil samples collected from the excavation limits indicated the presence of low concentrations of hydrocarbons that remained at the property. A groundwater sample collected from the excavation pit indicated DRO present at a concentration of 12,000 µg/L as well as low concentrations of VOCs.

- In July 2012 additional excavation of impacted soil was performed in the area of soil boring SB-1. It is reported that approximately 750 tons of contaminated soil was removed from the area of soil boring SB-1 in July 2012. Soil samples collected at the margins of the excavation limits indicate that the excavation was generally effective at removing the impacted soil.

- Four groundwater monitoring wells were subsequently installed and sampled in the area of the excavation which indicated generally low concentrations of hydrocarbons remaining. Based on the results, the site investigation regarding the property was closed by the NCRWQCB in April 2015.

It should be noted that the site investigations at the SMART property have indicated that contaminated soil and groundwater remain at the property. The Soil & Groundwater Management Plan remains in play as the mechanism to characterize and handle any soil or groundwater that is generated from the site if ground disturbing activities were to occur in the future.

As stated, the site investigation at the SMART property has been closed a second time by the NCRWQCB and the SGMP remains in place for future activities. Based on EBA's review of available information, combined with distance and Santa Rosa Creek which likely acts as a barrier to contaminant transport, this site is not seen as posing a threat of significant impact to the subject property.

Information regarding the SMART property can be found on the GeoTracker web site at the following address:

https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL0002016200

**Roy Cobb – 2 West 3rd Street, Santa Rosa**

The Roy Cobb site is located approximately 550 feet east of the subject property on the south side of Third Street. The site was investigated as a potential source of contaminants in soil and groundwater that were discharging from the Third Street Culvert. The site was part of the investigation to find the source of the discharge from this culvert into the creek.

Work at the property reportedly included the installation of 18 soil borings for the purpose of collecting soil and groundwater samples for chemical analysis. It is reported that no shallow soil contamination was encountered at the property and it was determined that that petroleum hydrocarbon impacted groundwater beneath the site originated from an off-site source. It appears that no additional investigation or remediation occurred at the property and the investigation was closed by the NCRWQCB in January 2014.

Based on EBA's review of available information, this site is not seen as posing a threat of significant impact to the subject property.

**Mead Clark – 3rd Street & Railroad Avenue, Santa Rosa**
The former Mead Clark site is located approximately 850 feet south-southeast of the subject property and is listed in regulatory files as having an investigation related to a former UST. In July 1986, a 500-gallon gasoline UST was removed from the site. Impacts to soil and groundwater reportedly included significant quantities of GRO, DRO and fuel related VOCs.

A significant amount of work was implemented to define the extent of impacts to soil and groundwater at the site that included the installation of many soil borings and 39 groundwater monitoring wells that were installed at the property and extending off-site to the north and west.

Several phases of remedial actions were reportedly conducted at the property that included the excavation of 3,800 cubic yards of contaminated soil, the completion of three high vacuum groundwater and soil vapor extraction events and the installation of an ozone/hydrogen peroxide remediation system. A review of available data indicates that the remedial efforts were generally effective at significantly reducing groundwater contaminant concentrations. The site investigation was closed by the NCRWQCB in December 2014 with low concentrations of groundwater contamination remaining in place.

Based on EBA's review of available information, combined with distance and Santa Rosa Creek which likely acts as a barrier to contaminant transport, this site is not seen as posing a threat of significant impact to the subject property.

Information regarding the property can be found on the GeoTracker web site at the following link:

https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0609700540

**Westside Engine & Machine – 12 West Third Street, Santa Rosa**
The Westside Engine & Machine is located across Third Street and approximately 225 feet southeast of the subject property and is listed in databases as having an active investigation related to a leaking UST. The site was used as an auto repair facility and had a 200-gallon waste oil UST that was reportedly removed in February 1993. Two soil samples were reportedly collected from beneath the UST, one from the east end (TP-1), and one from the west end (TP-2) (Edd Clark & Associates, Inc. [EC&A], 2022). Total petroleum hydrocarbons as gasoline (TPHg), ethylbenzene and xylenes were reported in the TP-1 soil

sample at concentrations of 160 mg/kg, 160 mg/kg and 550 mg/kg, respectively. The TP- 2 sample was reportedly non-detect (ND) for all requested analytes.

On October 28, 2008, three soil borings (B-1, B-2, and B-3) were reportedly advanced at the site (EC&A, 2021). Borings B-1, B-2, and B-3 were advanced to reported depths of 24.5 feet bgs, 26.5 feet bgs, and 21.5 feet bgs, respectively. TPH-g was detected in soil at a maximum concentration of 13 mg/kg (boring B-1 at 18 feet bgs) and in grab-groundwater samples at a maximum concentration of 4,900 µg/L (boring B-2). Benzene was detected in grab-groundwater samples in all three borings at a maximum concentration of 1.1 µg/L in boring B-3; ethylbenzene was detected in grab-groundwater samples from all three borings at a maximum concentration of 300 µg/L (boring B-2).

In April 2020, EC&A oversaw the advancement of four exploratory soil borings (B-4 through B- 7) and three well borings (MW-1 through MW-3) at the site (EC&A, 2022). Petroleum hydrocarbon constituents of concern (COCs) were only reported in one soil sample during this investigation, from the boring advanced for monitoring well MW-1 at a depth of 20.5 feet to 21 feet bgs. TPHg, benzene, ethylbenzene, xylenes, and naphthalene were reported in this soil sample at respective concentrations of 6.6 mg/kg, 0.023 mg/kg, 0.18 mg/kg, 0.014 mg/kg, and 0.041 mg/kg. No other COCs were reported above laboratory reporting limits (LRLs) in any of the other soil samples collected and analyzed during this investigation. Petroleum hydrocarbon COCs were only reported in one groundwater sample during this investigation, from monitoring well MW-1. TPHg, benzene, ethylbenzene, xylenes, and naphthalene were reported in the groundwater sample collected from MW-1 at respective concentrations of 1,500 µg/L, 2.2 µg/L, 7.5 µg/L, 19 µg/L, and 10 µg/L. No other COCs were detected above LRLs in any of the grab-groundwater samples or monitoring well groundwater samples collected and analyzed during this investigation.

Five subsequent groundwater monitoring events have been conducted at the site, occurring in May 2020, August 2020, November 2020, and March 2021 and October 2021 (EC&A, 2022). COCs have only ever been reported in monitoring well MW-1, at maximum concentrations of 2,600 µg/L (TPH-g), 5.6 µg/L (benzene), 58 µg/L (ethylbenzene), 62 µg/L (total xylenes) and 64 µg/L (naphthalene), all in the March 2021 monitoring event.

Three additional soil brings were reportedly advanced at the site in September 2021 (EC&A, 2022). The three borings were located around the former UST excavation: boring B-8, to the west of the former UST excavation, and two borings, B-9 and B-10, to the southwest and southeast, respectively, of monitoring well MW- 1. TPHg was detected in seven soil samples collected and analyzed during this investigation at a maximum concentration of 18 mg/kg in boring B-8 at a depth of 19 to 19.5 feet bgs. The soil samples with the highest concentrations of TPHg detected in each boring were collected from between 19 and 20 feet bgs. BTEX, MtBE and naphthalene were not detected above LRLs in any soil samples collected and analyzed during this investigation. Petroleum hydrocarbon constituents were detected in all three grab-groundwater samples collected and analyzed in this investigation. TPH-g, ethylbenzene, xylenes, and naphthalene were detected in boring B-8 at concentrations of 9,900 µg/L, 410 µg/L, 40 µg/L, and 140 µg/L, respectively. 1,2-Dibromoethane (EDB) was also detected in B-8 at a concentration of 1.1 µg/L. 1,2-Dichloroethane (1,2-DCA) was detected in B-9 at a concentration of 0.087 µg/L. TPH-g,

ethylbenzene, xylenes, and naphthalene were detected in B-10 at concentrations of 730 µg/L, 14 µg/L, 1.1 µg/L, and 1.8 µg/L, respectively. No other COC were detected above LRL in any of the grab-groundwater samples collected and analyzed during this investigation.

The LUST case file for this site was subsequently closed by the NCRWQCB in a letter dated August 17, 2023.

Based on a review of available information, this site is not seen as posing a threat of significant impact to the subject property.

**Additional Sites**
Additional properties in the surrounding area of the subject property are identified in regulatory agency files as having environmental issues. Many of these sites have completed investigations with regulatory oversight related to having investigations related to historical or leaking USTs or are identified as generators of hazardous materials and/or wastes. Based on topographic considerations, their distances from the subject property and/or status (i.e., closed), and/or the types of issues that caused them to be listed on the databases, additional database listings in the EDR report that were not identified and/or discussed above are not considered likely to have a significant potential to adversely impact the subject property.

### 4.1.3 Orphan Sites
An orphan site is a listing with an undefined location. Typically, orphan sites result from poor address and site location information. A review of this listing indicates that none of the identified orphan sites are located within the distance specified by ASTM standard practice for review. Orphan sites are listed in the EDR Radius Map included in Appendix C.

### 4.1.4 Vapor Encroachment Screening
EBA conducted an evaluation for vapor encroachment conditions (VECs) using methodology established in ASTM Standard of Practice E2600-10. The minimum distance criteria for the assessment of petroleum hydrocarbon releases pursuant to ASTM 2600-10 is one-tenth mile (528 feet) and one-third mile (1,720 feet) for volatile organic compounds. The objective of the VEC screen was to evaluate the following:

- If a VEC exists, or
- Is likely to exist, or
- Cannot be ruled out, or
- Can be ruled out because it does not exist or is not likely to exist.

As presented herein, there have been documented releases of petroleum hydrocarbons and VOCs at properties in the vicinity of the subject property. There are no documented releases of petroleum hydrocarbons or VOCs at the subject property. As discussed, there has been a significant amount of investigation and remediation conducted at these properties. The characterization of the extent of contaminants in soil and groundwater indicates that the extent of the groundwater contaminant plumes was well defined and determined to be a sufficient distance from the subject property as to not represent a

significant environmental concern. Based on a review of available information, a VEC at the subject property can be ruled out.

### 4.1.5 Per- and Polyfluoroalkyl Substances (PFAS)

As defined in Section 3.2.36 of the current ASTM Standard E1527-21, hazardous substance means "those substances defined as a hazardous substance pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and the courts." Hazardous substances that are not defined (or not yet defined) as hazardous substances under CERCLA are outside of the scope of the current ASTM Standard E1527-21.

On July 8, 2024, the Final EPA rule became effective that designates perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) as CERCLA hazardous substances. Per the current ASTM Standard E1527-21, once this rule went into effect, these substances are evaluated within the scope of this standard, and a release or likely release of PFOA and/or PFOS is considered a REC.

Other than PFOA/PFOS, compounds classified as PFAS are not currently classified as hazardous substances under CERCLA, and thus the potential presence of PFAS compounds (other than PFOA/PFOS) is outside of the scope of the current ASTM Standard E1527 and does not constitute a REC at this time. However, the User of this Report should be aware that regulatory criteria and classifications are subject to change.

A voluntary industry phaseout of PFOA and PFOS was first implemented in the late 1990s and was fully implemented for PFOS by 2002 and PFOA by 2015. Although PFOA and PFOS have been generally phased out since 2015, studies have found that precursor PFAS compounds in wastewater treatment systems may form PFOA and PFOS. As such, even after 2015, the presence of PFAS compounds in wastewater discharges is considered a likely source of PFOA and PFOS contamination.

EBA's research of potential PFAS contamination focuses on the release/likely release of PFOA/ PFOS. However, if additional information pertaining to other PFAS is identified, EBA will also assess/discuss these compounds, as deemed applicable/appropriate within the scope of this assessment.

It should be noted that EBA's screening of PFOA/PFOS and other PFAS compounds is based solely on review of the resources cited within this report. Identification, or lack thereof, is not a warranty that PFOA/PFOS or other PFAS contamination is present or absent at a site. Additionally, it should be noted that given the evolving nature of science and regulatory oversight of PFOA/PFOS and other PFAS compounds, additional sources of contamination may exist at the subject property, adjoining sites and/or other nearby sites that were not identified by the limited data and screening tools cited within this report.

As an initial screening tool for potential PFAS contamination, EBA reviewed PFAS-related database listings from EDR and compared known property uses to those known to potential include the use of PFAS. According to the EDR Radius Report the subject property is not listed on the PFAS ECHO database. The PFAS ECHO database is created by the Environmental Protection Agency (EPA) to flag potential Industry types that may be or may

have handled PFAS as one time or another. Inclusion of a facility in the Industry Sectors dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. As such, the listing of a site on the PFAS ECHO database does not indicate that a release of PFAS has occurred, only that there is a potential for PFAS to be on site based on the industry type found associated with the SIC/NAICS code for the facility.

The table below presents a screening toll used to determine whether or not the potential exists for PFAS to be present at a property based on industry type found associated with the SIC/NAICS code for the facility.

| Potential Source | Yes | No |
|---|---|---|
| Past or present industrial operations that potentially included the use of PFAS | | X |
| The use or discharge of AFFF | | X |
| Electroplating (1950s-present) | | X |
| *NOTE: Electroplating (specifically hard chromium plating) is an industrial activity where PFAS-containing mist suppressants may have been used* | -- | -- |
| Agricultural uses, specifically 1970s-present that included application of biosolids/WWTP sludge that potentially contained PFAS | | X |
| Wastewater treatment plant (WWTP) (1960s to Present) | | X |
| Landfill operations / waste disposal areas (1960s-present) | | X |
| Mining / quarrying / oil production | | X |
| Commercial car wash (1989-2010) | | X |
| Dry cleaner and/or commercial laundry (1970s-2010) | | X |

Based on a review of historical information for past and present uses of the subject property, the property is not indicated to have been occupied by any of the industry types which have the potential to use or result in a release of PFAS. However, as noted above, sanitary sewer lines conveying wastewater have the potential to contain PFAS compounds for household and industrial wastewater discharges that have been shown to contain these compounds. In particular, land application of sewage sludge (biosolids) near sewer line routes has been documented to be a potentially significant source of PFAS contamination, as well as areas receiving industrial discharge or pretreatment, which may contain high levels of PFAS. It is important to note however that the area of the subject property has not been the subject of the land application of sewage sludge, nor has the area received industrial discharge or pretreatment. Given the above information, combined with the lack of clear indication of a likely release or material threat of a release of wastewater from the sewer line(s), this is considered a *de minimis* condition. By definition, *de minimis* conditions do not present a material risk of harm to public health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not RECs (ASTM, 1527-21).

### 4.2 Additional Environmental Record Sources

To enhance and supplement the EDR Radius Report, searches for active sites, local records and/or additional state and tribal records were independently searched through their various websites. These records are reasonably ascertainable, and are sufficiently

useful, accurate and complete in light of the objective of the records review. Some of the other Environmental Records Sources contacted for information pertaining to the subject property were as follows:

- U.S. EPA (http://www.epa.gov/region09)
- California Environmental Protection Agency, Department of Toxic Substances Control (http://www.calepa.gov/) and (http://www.envirostor.dtsc.ca.gov/public/)
- City of Santa Rosa Fire Department – CUPA Agency, http://ci.santa-rosa.ca.us/departments/fire/Pages/default.aspx
- County of Sonoma Department of Health Services (https://sonomacounty.ca.gov/Health/Environmental-Health-and-Safety/)
- California State Water Resources Control Board (http://geotracker.swrcb.ca.gov/).

### 4.2.1 City of Santa Rosa Fire Department

The Certified Unified Program is the consolidation of several state environmental programs into one program under the authority of a Certified Unified Program Agency (CUPA); these can be a county, city, or JPA (Joint Powers Authority). This program was established under the amendments to the California Health and Safety Code made by SB 1082 in 1994.

The programs generally consist of the Hazardous Materials Business Plan/Emergency Response Plan, Hazardous Waste, Tiered Permitting, Underground Storage Tanks, Aboveground Storage Tanks (SPCC only) and the Uniform Fire Code Hazardous Materials Management Plan.

A CUPA is a local agency that has been certified by California EPA to implement the state environmental programs with the local agency's jurisdiction.

- Hazardous Materials Business Plans
- Hazardous Waste Generator
- Underground Storage Tanks
- Accidental Release Prevention
- Aboveground Petroleum Storage Tanks
- The Uniform Fire Code as related to hazardous materials

The Santa Rosa Fire Department did not contain any information for the subject property as there is no physical address for the property.

### 4.2.2 County of Sonoma Department of Health Services

The County of Sonoma Department of Health Services – Environmental Health Department (CSDHS-EHD) online records repository did not contain any files for the subject property.

Records were searched at the following web address. https://onbaseprodext.sonoma-county.org/EHSEP5/services/document-search/index.html

### 4.2.3 North Coast Regional Water Quality Control Board
Information for the subject property and surrounding area was reviewed on the GeoTracker web site information archive maintained by the State Water Resources Control Board. The NCRWQCB did not possess any records for the subject property.

### 4.2.4 California State Water Resources Control Board GeoTracker Database
The GeoTracker web site is an online information repository for environmental cleanup sites that is administered and overseen by the State Water Resources Control Board. The GeoTracker site was consulted to determine if either the subject property or surrounding properties were identified in this environmental database as having environmental concerns. The subject property was not identified. For those properties which warranted additional review, EBA evaluated available information on GeoTracker, the results of which is discussed above in Section 4.0.

The GeoTracker site was accessed at:
https://geotracker.waterboards.ca.gov/map/?CMD=runreport&myaddress=Pierson+Street+Santa+Rosa

### 4.2.5 California Department of Toxic Substances Control EnviroStor Database
The EnviroStor web site was consulted to determine if either the subject property or surrounding properties were identified in this environmental database as having environmental concerns. The subject property was not identified.

The EnviroStor web site was accessed at:
EnviroStor Database (ca.gov)

### 4.2.6 City of Santa Rosa (All Departments)
The City of Santa Rosa online records depository did not contain any information for the subject property as the property consists of a roadway with no physical address.

# 5.0 USER PROVIDED INFORMATION
User provided information is discussed in the following sections.

## 5.1 User Questionnaire
A User Questionnaire was completed by the Client. A copy of the questionnaire is included in Appendix H.

## 5.2 Results of Title Records Search for Environmental Liens or Activity and Use Limitations
Review of Title and Judicial Records for Environmental Liens or Activity and Use Limitations (AULs) is the responsibility of the user of the Phase I ESA Report. However, based on the nature of this environmental assessment a review of public records for environmental liens or AULs is not applicable and the lack of such research is not considered a significant data gap.

## 5.3 Specialized Knowledge or Experience of the User

The User of this assessment indicated a general awareness of the historical use of the subject property but relies upon this assessment to understand environmental conditions at the subject property. A User Questionnaire is included in Appendix H.

## 5.4 Actual Knowledge of User

The User of this assessment did not indicate any specialized knowledge regarding environmental conditions at the subject property.

## 5.5 Commonly Known or Reasonably Ascertainable Information

The User of this report indicated as having generally known and/or reasonably ascertainable information regarding the history and use of the subject property.

## 5.6 Reason for Significantly Lower Purchase Price

An assessment of the relationship of the purchase price to the fair market value of the subject property, assuming there is no contamination on the site, is required under 40 CFR Part 312, Section 312.29 to maintain innocent landowner defense. The sections from the federal document are summarized below:

1). Persons to whom this part is applicable must consider whether the purchase price of the subject property reasonably reflects the fair market value of the property, assuming there is no contamination on the property; and

2). Persons who conclude that the purchase price of the subject property does not reasonably reflect fair market value, if the property were not contaminated, should consider whether or not the differential in purchase price and fair market value is due to the presence of releases or threatened releases of hazardous substances.

The subject property is being assessed for the rehabilitation of the Pierson Street roadway not for the sale of the subject property area. As such, no assessment of the purchase price is included herein.

## 5.7 Owner, Property Manager and Occupant Information

The subject property is owned by the City of Santa Rosa and consists of a portion of the Pierson Street roadway.

There are no occupants within the subject property.

## 5.8 Reason for Performing Assessment

It is our understanding that the User contracted this Phase I Environmental Site Assessment to provide an assessment of the environmental condition of the subject property area prior to the rehabilitation of the Pierson Street roadway.

## 5.9 Previous Reports

No previous reports for the subject property were available or provided for the subject property. Reports for near site properties were reviewed for several properties which are discussed and referenced herein.

# 6.0 INTERVIEWS

ASTM E1527-21 requires the Environmental Professional to interview existing and/or past owners, operators, and occupants likely to have material information about the Property, only if they have been identified, and the information likely to be obtained is not duplicative of information from other sources. In addition, if the property is demonstrably abandoned or deserted, or there is evidence of potential unauthorized uses of or uncontrolled access to the subject property the Environmental Professional is required to conduct interviews with neighboring owners or occupants. The following interviews were conducted for this assessment.

Mr. Ben Bryant from Brelje & Race Consulting Engineers provided site documentation as part of this assessment to understand the proposed work scope for the upgrading of utilities and roadway corridor rehabilitation activities and defining the subject property boundaries.

Since the subject property has no active or historical site investigations, no regulatory agency interviews were conducted as part of this assessment.

# 7.0 SITE RECONNAISSANCE

## 7.1 Methodology and Limiting Conditions

EBA environmental professionals conducted a site reconnaissance on February 11, 2026. The site reconnaissance entailed viewing the subject property and the surrounding areas. EBA inspected the subject property by walking and/or driving the property and noting any observations. The subject property was inspected to observe the property and to identify discernible or potential environmental concerns. In addition, a reconnaissance of adjacent properties was performed to confirm surrounding land use and conditions. Information was obtained by interviews with knowledgeable individuals regarding the past and current uses of the subject property. No limitations were encountered to limit the extent of the property inspection. Findings from the site reconnaissance activities are summarized in the following sections.

EBA also conducted a windshield survey of adjacent properties during the site reconnaissance.

## 7.2 Current Use of the Property

The subject property currently consists of the established Pierson Street roadway within the incorporated area of downtown Santa Rosa.

## 7.3 Description of Structures & Site Improvements

The subject property area consists of a paved street with existing asphalt surfaces and curb and gutter. The street provides a right of way for utilities that are reported to include water, sewer and storm drain infrastructure. No additional improvements are present on the subject property.

### 7.4 Exterior Observations
As discussed herein, the subject property consists entirely of a roadway with curb, gutter and sidewalk. At the time of EBA's site reconnaissance, EBA did not observe any evidence of the use or storage of any hazardous materials, wastes or other harmful chemicals at any exterior areas of the subject property in such a way as to represent a threat of release to the environment. EBA paid particular attention to see if there was any evidence of historical USTs within the right of ways.

### 7.5 Interior Observations
No interior observations were made for this assessment.

### 7.6 Hazardous Substances and Petroleum Products
At the time of the property inspection no fuels or hazardous substances were observed to be present at the subject property.

### 7.7 Odors
No odors were observed at the subject property during the site reconnaissance.

### 7.8 Pools of Liquid
No pools of free liquid were observed at the subject property during the site reconnaissance.

### 7.9 Drums
No drums or containers were observed at the subject property during the site reconnaissance.

### 7.10 Unidentified Substance Containers
No unidentified substance containers were observed at the subject property during the site reconnaissance.

### 7.11 Stains or Corrosion
No stains or corrosion were observed at the subject property during the site reconnaissance.

### 7.12 Drains and Sumps
No drains or sumps were observed at the subject property during the site reconnaissance other than storm drain inlets present within the curb and gutter of the existing street.

### 7.13 Pits, Ponds or Lagoons
No pits, ponds or lagoons are present at the subject property.

### 7.14 Stained Soil or Pavement
No stains were observed on soil or pavement surfaces during the site reconnaissance.

### 7.15 Solid Waste
No solid waste was observed at the subject property during the site reconnaissance.

### 7.16 Stressed Vegetation
No areas of stressed vegetation were observed at the subject property during the site reconnaissance.

### 7.17 Wells
No water supply wells or groundwater monitoring wells were observed at the subject property.

### 7.18 Septic Systems
No septic systems are reported to be present at the subject property.

### 7.19 Underground Fuel Storage Tanks
There is no indication of the current or historical use of underground fuel storage tanks at the subject property.

### 7.20 Aboveground Fuel Storage Tanks
No aboveground fuel tanks were observed at the subject property during the site reconnaissance.

### 7.21 Utilities
EBA understands the subject property includes municipal water, stormwater and sewage infrastructure that is owned and maintained by the City of Santa Rosa.

### 7.22 Transformers
No electrical transformers were observed at the subject property during the site reconnaissance.

### 7.23 Dump Sites
There is no indication of current or historical dump sites at the subject property.

### 7.24 Non-Scope Observations

#### 7.24.1 Asbestos
No structures are present within the subject property area and therefore no asbestos containing materials are suspected to be present.

#### 7.24.2 Lead Based Paint
No structures are present within the subject property area and therefore no lead-based paint is suspected to be present.

#### 7.24.3 Radon
The U.S. Environmental Protection Agency Radon Zone Classification for Sonoma County is 3, which is defined as having a low potential to have radon concentration less than 2 picocuries per liter (pCi/L). The U.S. EPA action level for radon is 4.0 pCi/L. Based on the radon concentration information, it is unlikely that radon abatement activities would be required at the subject property.

# 8.0 DEVIATIONS

## 8.1 Data Gaps

AAI Section 312.20(g) states that:

*To the extent there are data gaps ... that affect the ability of persons conducting all appropriate inquiries to identify conditions indicative of releases or threatened releases in each area of inquiry under each standard and practice, such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps with regard to the ability to identify conditions indicative of releases or threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances*.

Data gaps in our historic research, which range between 1916 and 2026, were encountered. Data failure occurs when a significant (10 years or more) gap of time exists between two historic sources and a reasonable effort has been made to obtain additional sources of information. Although data failure with respect to historical research, as defined in the ASTM standard, has occurred, it does not diminish EBA's ability to provide an opinion on a release or potential release of hazardous substances at the subject property. In addition, the previous owners and/or operators of the subject property have not been identified by the User and were not interviewed. Although the inability to interview past owners and/or operators constitutes a data gap, based on information obtained from other sources EBA does not consider this data gap to be a significant limitation to this report. These data gaps are not considered significant and do not affect the ability of EBA's environmental professional to identify whether a given issue is a REC.

## 8.2 Exceptions or Deletions

There were no exceptions to, or deletions from, ASTM Practice E1527-21.

# 9.0 ADDITIONAL SERVICES

## 9.1 Non-Scope Considerations

The following environmental issues are outside the scope (non-scope considerations) of the standard practice defined by ASTM Standard Practice E1527-21:

- Regulatory Compliance
- Cultural and Historic Resources
- Industrial Hygiene
- Health and Safety
- Ecological Resources
- Endangered Species
- Indoor Air Quality
- Biological Agents
- Mold

EBA identified no ASTM non-scope considerations/RECs in connection with the subject property that represent potential business environmental risk but are outside the standard scope of services prescribed by ASTM Standard Practice E1527-21.

### 9.2 Additional Services

No additional services beyond the standard scope of services prescribed by ASTM Standard Practice E1527-21 were requested by the Client.

## 10.0 DISCUSSION

**Subject Property Description and Use**

The project includes a portion of Pierson Street from Santa Rosa Creek to Third Street in which the entire corridor (sidewalks, roadway, utilities, etc.) is proposed for rehabilitation/improvement by the City of Santa Rosa, California that is located as shown on Figure 1 in Appendix A. The subject property has no legal property or property parcels of boundaries and for the purposes of this assessment the description of the subject property is that segment of Pierson Street shown on the attached Figures 2 and 3 in Appendix A. Site photographs depicting current subject property conditions and land use in the vicinity are included in Appendix B.

The subject property currently consists of the established Pierson Street roadway within the incorporated area of downtown Santa Rosa.

**Subject Property History**

Available historical records, including aerial photographs, indicate that the area of the subject property was a large orchard circa 1893 before the Pierson Street roadway was constructed in 1904 and development of surrounding lands with residences began. The subject property has remained in use as the Pierson Street roadway to the present day.

The use of the subject property is generally well documented without any significant data gaps. Due to the passage of time, there is a lack of available previous property owners and historical documentation regarding past uses of the property which represents a data gap. However, from the available information it appears that the use and history of the property is well known, and this data gap is seen as insignificant.

**Subject Property Regulatory Records Review**

The subject property is not identified in any regulatory agency databases and files as a regulated facility with the exception of one listing on the CA CHMIRS database. This database listing is associated with a reported water-main break from an area residence in 2011 that reportedly released 10,000-gallons of water to Santa Rosa Creek. Repairs were subsequently made to the water-main and this incident resolved. This incident is not seen as an environmental concern.

There is no indication of the use, storage or disposal of hazardous materials or wastes at the subject property. Lastly, there is no indication of the current or historical use of underground fuel storage tanks or dump sites at the subject property.

**Surrounding Properties Regulatory Records Review**
Based on a review of available regulatory information, due to their distances and groundwater flow-directions relative to the site, the nature of their reported release and/or information obtained from a review of available regulatory files, there are no documented offsite facilities within EDR's specified search radii which appear to represent a threat of adverse environmental impact to the subject property.

**Vapor Encroachment Concerns**
EBA conducted an evaluation for vapor encroachment conditions (VECs) using methodology established in ASTM Standard of Practice E2600-10. The minimum distance criteria for the assessment of petroleum hydrocarbon releases pursuant to ASTM 2600-10 is one-tenth mile (528 feet) and one-third mile (1,720 feet) for volatile organic compounds. The objective of the VEC screen was to evaluate the following:

- If a VEC exists, or
- Is likely to exist, or
- Cannot be ruled out, or
- Can be ruled out because it does not exist or is not likely to exist.

As presented herein, there have been documented releases of petroleum hydrocarbons and VOCs at properties in the vicinity of the subject property. As discussed, there has been a significant amount of investigation and remediation conducted at these properties. The characterization of the extent of contaminants in soil and groundwater indicates that the extent of the groundwater contaminant plumes have been well defined and determined to be a sufficient distance from the subject property as to not represent a significant environmental concern. Based on a review of available information, a VEC at the subject property can be ruled out.

**Recognized Environmental Conditions**
Recognized Environmental Conditions (RECs) are defined by ASTM Standard Practice E1527-21 as the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. In the course of performing this ESA, EBA did not identify any RECs associated with the subject property or any of the adjoining parcels.

## 11.0 CONCLUSIONS AND OPINION
EBA Engineering has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of that portion of Pierson Street in Santa Rosa, California, from Santa Rosa Creek to Third Street in which the entire corridor (sidewalks, roadway, utilities, etc.) is proposed for rehabilitation/improvement by the City of Santa Rosa that is located as shown on Figure 1 in Appendix A. The subject property has no legal property or property parcels of boundaries and for the purposes of this assessment the description of the subject property is that

segment of Pierson Street shown on the attached Figures 2 and 3 in Appendix A. Any exceptions to, or deletions from, this practice are described herein. Based on conclusions from the environmental records search, historical data review, and the site reconnaissance we find no Recognized Environmental Conditions in connection with the subject property.

No additional environmental review or investigation appears to be warranted.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

## TARGET PROPERTY INFORMATION

### ADDRESS

PIERSON STREET
SANTA ROSA, CA 95401

### COORDINATES

CA RGA LUST Recovered Government Archive Leaking Underground Storage Tank

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities,

private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/26/2025 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |

| EPA Id: CAD983646050 | | | | |

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/26/2025 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

| Lower Elevation | Address | Direction / Distance | Map ID | Page |

***Lists of Federal RCRA generators***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/30/2025 has revealed that there is 1

RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/30/2025 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 11/30/2025 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/20/2025 has revealed that there are 28 CA ENVIROSTOR sites within approximately 1 mile of the target property.

***Lists of state and tribal leaking storage tanks***

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 67 CA LUST sites within approximately 0.5 miles of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 37 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/30/2025 has revealed that there are 41 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/17/2025 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 51 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 11/30/2025 has revealed that there are 16 E MANIFEST sites within approximately 0.25 miles of the target property.

CA CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CA CUPA Listings list, as provided by EDR, has revealed that there are 6 CA CUPA Listings sites within approximately 0.25 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 12/31/2019 has revealed that there is 1 NY MANIFEST site within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |

| PG&E GAS PLANT | 5TH & MENDOCINO | NE 1/2 - 1 (0.614 mi.) | BC312 | 1100 |

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 12 EDR Hist Auto sites within approximately 0.125 miles of the target property.

# EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| Site History: | Excerpts taken from Trans Tech Consultants "Summary Report" 1/9/09 - One 1,000 gallon gasoline UST removed on 11/5/92. One soil sample collected from beneath the UST showed concentration of 160 mg/kg TPH-g. A soil sample collected from the east end of the excavation contained 160 and 550 mg/kg ethyl benzene and total xylenes, respectively. Soil sample collected from the west end of the UST were below the method detection limit for all analyses. On 10/28/08 3 soil borings advanced; soil and groundwater (gw) samples collected. The highest concentrations of TPH-g, Benzene, Ethylbenzene, Xylene detected in grab groundwater samples, in parts per billion, were 2900, 1.1, 300, 60, respectively. The consultant concluded the high levels detected in gw samples collected from boring B-2 may be anamalous for reasons explained in the report. A 2nd work plan has been submitted for further investigation and to verify original results. Site property was annexed into the City of Santa Rosa. The site is transferred to the NCRWQCB as the lead agency on 7/25/18. In April 2020, Edd Clark & Associates (EC&A) advanced four soil borings (B-4 through B-7) and installed three groundwater monitoring wells (MW-1 through MW-3). COCs only detected on one soil sample (MW-1 at 20.5 to 21 feet bgs) with TPHg, benzene, ethylbenzene, xylenes, and naphthalene detected at respective concentrations of 6.6 mg/kg, 0.023 mg/kg, 0.014 mg/kg, and 0.41 mg/kg. COCs also only detected in groundwater of MW-1 during initial sampling event: 1,500 ug/L TPHg, 2.2 ug/L benzene, 7.5 ug/L ethylbenzene, 19 ug/L xylenes, and 10 ug/L naphthalene. September 2021 - EC&A advanced three soil borings (B-8 through B-10). Max detection of TPHg in soil was 18 mg/kg in B-8 at depth of 19 to 19.5 feet bgs. BTEX and naphthalene not detected in any soil samples collected. Grab groundwater sample from B-8 yielded TPHg, ethylbenzene, xylenes, and naphthalene concentrations of 9,900 ug/L, 410 ug/L, 40 ug/L, and 140 ug/L, respectively. February to April 2022 - EC&A conducted sensitive receptor survey, identifying six water supply wells within the search radius. One well was located 60 feet west of the site boundary at Blakeslee Electric and was sampled in September 2022 - no COCs were detected. 1/24/2023 - Site evaluation performed by Regional Water Board found site eligible for closure as it meets Low Threat Closure Policy. After 60 day public comment period (3/17/2023 - 5/16/2023) in which no comments were received, wells were destroyed and no further action is required. |

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

| Citation: | HSC 6.5 25205.16(b) - California Health and Safety Code, Chapter 6.5, Section(s) 25205.16(b) |
| Violation Description: | Failure to obtain or maintain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste. Maintenance of ID numbers must be annually verified by using the Electronic Verification Questionnaire (EVQ). *Inspector verify by reviewing HWTS or contacting DTSC Business Operations unit at evq@dtsc.ca.gov. |
| Violation Notes: | Returned to compliance on 05/13/2025. The generator failed to obtain or maintain an Identification Number to manage hazardous waste. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without obtaining and maintaining an Identification Number. To maintain an active Identification Number you must annually complete the Electronic Verification Questionnaire (eVQ). Submit documentation to the CUPA demonstrating that you have obtained an Identification Number, or taken necessary steps to reactivate an inactive number. Ensure that you complete the annual Electronic Verification Questionaire to maintain an active Identification Number. |

| Facility Project Subtype: | Not reported |
| RWQCB Region: | NORTH COAST RWQCB (REGION 1) |
| Site History: | The site is in northwest Santa Rosa with two rectangular shaped, light-industrial buildings. Historically the property has been occupied by an auto wrecking/junk yard facility, fueling service station, and other commercial and light industrial businesses. Phase I and II completed and verify petroleum impacts. Please see Jerry |

**FRITSCH, JERRY (Continued)** **S118154694**

Fritsch, UST site 1TSR443 for current information about this site. Shallow soil data indicates that there were no impacts from the auto wrecking/junk yard use. The contaminants of concern are petroleum hydrocarbons with two plumes on site approximately 200 and 100 feet in length. A soil and groundwater management plan which is designed to limit worker exposure in the restricted area during future redevelopment of the property has been development for the property.

| RWQCB Region: | NORTH COAST RWQCB (REGION 1) |
| Site History: | Site consists of two parcels. 1893 and 1904 Sanborn maps show that the site was an orchard. 1950 Sanborn map shows a former service station in the southwest portion of the site. In 2010, a single 550-gallon UST from the former service station was removed. A release of petroleum from the UST to soil and groundwater was documented. According to the current owner, a hoist was also removed from the area of the former service station. Sanborn maps from 1950 also show a steel oil tank and oil warehouse in the east central portion of the site (near the rairroad tracks). 1956 and 1963 aerial photos show many vehicles on the property and indicate a history of an auto junk or wrecking yard. Two petroleum plumes are located on site. The |

**FRITSCH, JERRY (Continued)** **S109277138**

first, located on the eastern side of the property is approximately 200 feet in length and consists of gasoline, diesel, and kerosene. The second is in the southwest corner and approximately 100 feet in length. The soil motor oil contaminant is concentrated in the top 9.5 feet between 100 and 8,400 mg/kg. The gasoline, diesel, and kerosene soil contamination are between 9.5 and 25 feet bgs. There is a non-UST and UST case open on this site. Shallow soil data indicates that there were no impacts from the auto wrecking/junk yard use. A soil and groundwater management plan which is designed to limit worker exposure in the restricted area during future redevelopment of the property has been development for the property. Geotracker uploads for this site will be uploaded to the 1TSR433 Geotracker record.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
Registry ID: 110002644309

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE

**THE BARRICADE COMPANY (Continued)** **1000109846**

LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.

Registry ID: 110055741390

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

| Site History: | This is a former auto wrecking site which reportedly operated between the 1960s and 1990s, and included operation of a car crusher. A portion of the site is occupied by several residences. Most of the property is now covered in concrete. Petroleum hydrocarbons detected in shallow soil but did not persist with depth. Petroleum hydrocarbons were not detected in groundwater and dissolved metals concentrations did not excee regulatory screening levels. |

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

| Site History: | Former Bulk facility with ASTs. The USTs that were previously located on this site were addressed in case case No. 1TSR413 which was closed in 2014.<br><br>SL0609750964. Much of the UST case information has been included in this AST case file. Investigation of the AST/petroleum hydrocarbons has been conducted by ExxonMobil. PCE has been detected in groundwater at concentrations exceeding MCLs and WQOs. However, there is no information that PCE was utilized by the former petroleum bulk fuel terminal site and historic records indicate possible solvent use by more recent users of the site than ExxonMobil. Petroleum hydrocarbon investigation & remediation results have been compared to the LTCP and the site meets LTCP criteria, and the case is recommended for closure. |

| Description: | Per the reporting party: A towing facility that brings in wrecked vehicles reportedly allows assorted vehicle fluids to leak without cleanup. When it rains, the water carries these fluids down onto the road and into the Santa Rosa Creek. No known actions have been taken by the towing company to stop the release or prevent it. At the time of report, there is no indication of any cleanup operation. |

| Site History: | Shell DZ is a former Shell Bulk petroleum storage plant operated in the 1960s, located at 257 Dutton Ave. The adjacent Shell-branded service station at 255 Dutton Ave has been in operation since the early 1960s. DZ Inc. purchased the former bulk plant in 1974 and an equipment rental shop is currently located on the site. Shell DZ and the Shell Station are managed as one commingled plume site per a 2003 agreement between the responsible parties. The Shell station is enrolled in the California Underground Storage Tank Cleanup Fund. MTBE in groundwater contamination is impacting two private water supply wells located a few hundred yards downgradient from the sites (east of Dutton Avenue), and the wells require carbon treatment and quarterly monitoring. |

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

**SHAMROCK MATERIALS (EAST PARCEL) (Continued)** **1000593502**

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on Brownfields properties assessed or cleaned up with grant funding, as well as information on Targeted Brownfields Assessments (TBA) performed by EPA Regions.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

| CA Enviroscreen 4 Score: | 50-55% |
| Military DOD Site: | No |
| Facility Project Subtype: | Not reported |
| RWQCB Region: | NORTH COAST RWQCB (REGION 1) |
| Site History: | This was originally a 1-acre parcel that had elevated concentrations of lead in soil in the southern part of the site (next to Santa Rosa Creek). The lead contamination was likely due to imported fill material. The extent of soil contamination was defined, and groundwater samples contained no lead. In 2011, about 450 tons of soil were removed from the contaminated area during construction of a bike path. In 2012 the property was split into 0.6 acre northern and 0.4 acre southern parcels. The southern parcel contains the remaining lead contamination. There is a private residence on the northern parcel which is slated for redevelopment. The northern "clean" parcel retained the 330 Hewett Street address. |

| | |
|---|---|
| Violation Description: | Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months. |
| Violation Notes: | Returned to compliance on 11/22/2021. Overfill prevention equipment inspection test on 10/27/2021 found that the product 87 flapper valve was damaged. Drop tube will be replaced. |

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

| Site History: | The Shell-branded service station and former DZ, Inc. petroleum fuel bulk plant, located at 255 and 257 Dutton Avenue, respectively, are sited in a commercial section of southwest Santa Rosa, California. The Shell station has been in operation since the early 1960s. The DZ site is a former Shell bulk plant, originally operated by Shell in the 1960s and sold in 1974 to DZ, Inc. The two adjacent properties are managed as one commingled plume site per a 2003 agreement between the responsible parties, and are currently enrolled in the California Underground Storage Tank Cleanup Fund. |

Site History: Electronic data reports for this co-mingled plume site are uploaded to the LUST case 1TSSO079. The site is the location of an active gas

**SHELL SERVICE STATION - DUTTON AVENUE (Continued)** **S101304919**

station where an investigation and cleanup is in progrsess for releases from underground storage tanks (USTs) . Groundwater beneath this site has also been impacted by releases from the adjacent petroleum bulk plant. The site invrstigation and cleanup activities are being managed as a co-mingled plume. All case management activities and site investigation data related to the UST releases are being managed under the Geotracker Case # 1TSO079. The non-tank Geotracker case 1NSO079 is redundant and un-necessary and will be closed as an administrative action to improve utility of the Geotracker for documenting regulatory and cleanup activities.

| Site History: | This property was formerly owned by Poultry Producers of Central California who owned and operated an underground gasoline tank. The property was sold to T.M. Cobb and the City purchased the northern most portion of the property to widen the street. The discharge was discovered years later. Based on historical records, the tank location is beneath the street. The Phase II investigation revealed significant groundwater impacts beneath the building. A soil source was not identified. |

| Site History: | Problem Description: In July 1998, petroleum discharges to soil and |

**ALLEFAX (Continued)** **S103393094**

groundwater were discovered following the removal of fuel underground storage tanks and product piping. Site investigations conducted in January 2001 confirmed petroleum impacts in soil and groundwater. Actions Completed: - In November 2005, limited over-excavation of contaminated soil was completed at one of the former tank locations. - Between January 2001 and June 2013, investigators advanced thirty-one exploratory borings, two Cone Penetrometer Test borings, and installed seven groundwater monitoring wells to define the extent of contamination in soil and groundwater. - Site investigators conducted periodic groundwater monitoring and reporting from January 2005 through May 2012. Assessment of Soil and Groundwater The results of soil sampling and analysis demonstrate that significant levels of petroleum contamination are not present in soil to a depth of ten feet below round surface. Periodic groundwater monitoring results demonstrate that the area of contamination in groundwater is stable or decreasing, and that the petroleum constituents remaining in groundwater do not present an unacceptable threat to human health. Soil and groundwater conditions at the site are consistent with the low-threat case closure criteria specified in the State Water Resources Control Board s Low-Threat Underground Storage Tank Case Closure Policy.

Site History: The Site development began in 1904, and historical operations at the Site have largely been related to the processing and transporting of fish products. As part of these operations, fish products were stored

**POINT ST. GEORGE FISHERIE (Continued)** **1000321786**

at the Cold Storage Building with refrigeration supplied from power derived from the adjacent Engine Room and UST3. The Point St. George Fisheries facility closed in 1993 and removal of equipment and demolition of the process buildings were completed in 2000. The Site is currently being redeveloped into approximately 110 two-story houses with associated streets, utilities, paved and landscaped areas Investigation and remedial activities commenced at the Site in 1985: In 1997, BSK Associates (BSK) removed the two tanks and soil to a depth of 15 feet below ground surface (bgs) and approximately 3 feet outward from the sides of the tanks. Petroleum hydrocarbons were detected in confirmation soil samples along the western and southern walls of the excavation. In October 1999, approximately 2773 tons of petroleum-impacted soil were excavated from the western property boundary in the vicinity of the former UST3 (Former Engine Room Excavation) and removed for offsite disposal Demolition of the operation buildings and offices was completed in January 2000. In December 2000 and January 2001, approximately 2,153 tons of petroleum-impacted soil were excavated and removed for off-site disposal. Between March and July 2004, approximately 1860 cubic yards (approximately 2325 tons) of petroleum-impacted soil were excavated and removed for off-site disposal. Demolition of a dry goods warehouse, paved driveways, and concrete foundations of the former buildings was completed in 2005. Between 1996 and 2009, the responsible party installed thirty monitoring wells and collected samples from thirty-four exploratory borings to define the extent of groundwater contamination Petroleum hydrocarbons remain in soil at depths deeper than eight feet below ground surface beneath some areas of the site. Contaminated soil has been removed to the extent feasible. Petroleum hydrocarbons remain in groundwater beneath the site. Periodic groundwater monitoring demonstrates that the area of groundwater contamination is stable or decreasing. An environmental covenant will be recorded to prohibit groundwater extraction and will establish specific requirements excavating in some areas of the Site. With the establishment of the environmental covenant restrictions, conditions at the Site are consistent with the closure criteria specified in the State Water Resources Control Board s Low-Threat Underground Storage Tank Case Closure Policy.

T0609700542 The Site development began in 1904, and historical operations at the Site have largely been related to the processing and transporting of fish products. As part of these operations, fish products were stored at the Cold Storage Building with refrigeration supplied from power derived from the adjacent Engine Room and UST3. The Point St. George Fisheries facility closed in 1993 and removal of equipment and demolition of the process buildings were completed in 2000. The Site is currently being redeveloped into approximately 110 two-story houses with associated streets, utilities, paved and landscaped areas Investigation and remedial activities commenced at the Site in 1985: In 1997, BSK Associates (BSK) removed the two tanks and soil to a depth of 15 feet below ground surface (bgs) and approximately 3 feet outward from the sides of the tanks. Petroleum hydrocarbons were detected in confirmation soil samples along the western and southern walls of the excavation. In October 1999, approximately 2773 tons of petroleum-impacted soil were excavated from the western property boundary in the vicinity of the former UST3 (Former Engine Room Excavation) and removed for offsite disposal Demolition of the operation buildings and offices was completed in January 2000. In December 2000 and January 2001, approximately 2,153

**POINT ST. GEORGE FISHERIE (Continued)** **1000321786**

tons of petroleum-impacted soil were excavated and removed for off-site disposal. Between March and July 2004, approximately 1860 cubic yards (approximately 2325 tons) of petroleum-impacted soil were excavated and removed for off-site disposal. Demolition of a dry goods warehouse, paved driveways, and concrete foundations of the former buildings was completed in 2005. Between 1996 and 2009, the responsible party installed thirty monitoring wells and collected samples from thirty-four exploratory borings to define the extent of groundwater contamination Petroleum hydrocarbons remain in soil at depths deeper than eight feet below ground surface beneath some areas of the site. Contaminated soil has been removed to the extent feasible. Petroleum hydrocarbons remain in groundwater beneath the site. Periodic groundwater monitoring demonstrates that the area of groundwater contamination is stable or decreasing. An environmental covenant will be recorded to prohibit groundwater extraction and will establish specific requirements excavating in some areas of the Site. With the establishment of the environmental covenant restrictions, conditions at the Site are consistent with the cleanup and mitigation requirements for case closure.

Violation Date: 02-09-2024
Citation: HSC 6.7 25299(a)(9) - California Health and Safety Code, Chapter 6.7, Section(s) 25299(a)(9)
Violation Description: Leak detection equipment disabled or tampered with in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak.
Violation Notes: Returned to compliance on 02/09/2024. Owner/Operator tampered with and/or disabled leak detection equipment in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak. Both fill up sensors were not installed to detect the earliest possible leak. One sensor was completely out and laying on its side at the bottom in liquid and the other sensor 87, was hung in a position that did not allow it to detect the earliest possible leak. because they were both out of position, the veeder root did not go into alarm. Owner/Operator shall not disable or tamper with monitoring equipment. Repair/replace equipment so that it functions

CA Enviroscreen 4 Score: 75-80%
Military DOD Site: No
Facility Project Subtype: Not reported
RWQCB Region: NORTH COAST RWQCB (REGION 1)
Site History: The site was the former Hill/Roseland/Payless Cleaners at 761 Sebastopol Road from approximately 1965 through 1971, and was located in a 7-acre neighborhood shopping center. Dry cleaning was done in the western part of the building, and Monty's Launderette occupied the eastern half (at least through 1977). The dry cleaner/launderette building was demolished in 2009; four other buildings on this parcel were demolished in late 2014 to early 2015, leaving only one large commercial structure. The site is paved. A gasoline station facing Sebastopol Road and located in the shopping center was investigated, remediated and closed. (Geotracker ID T0609700174). PCE from the former dry cleaning facility was discovered in 2002 during a sanitary sewer assessment and underground utility survey. Several soil, soil gas, and groundwater investigations were conducted since then, including a sensitive receptor survey, installing groundwater monitoring wells, and borings. Limited soil excavation was completed after removal of the former dry cleaner building in 2009, and additional source area soil excavation was done in 2015. In-situ chemical oxidation (ISCO), where an oxidizing solution is injected into soils beneath the site to destroy PCE, was begun in 2020. The oxidizing solution naturally degrades into harmless byproducts.

| Site History: | Santa Rosa Fire Department (SRFD) inspectors observed oil staining on the ground during site inspections, and issued Hazardous Waste Illegal Discharge Reports in 1987 and 1990. for surface discharges of dumped waste oil. SRFD requested excavation of contaminated soils, soil sampling, secondary containment, and removal of engines leaking oil on the ground. A Regional Water Board inspection memo in 1991 states that oil stained soil had been excavated and placed on plastic on the property. A 1992 laboratory report in the file record indicates that a soil sample was analyzed and contained 120 ppm motor oil. However, no maps or other indications of where the soil sample was collected from were provided. The area of the former stained soil was paved over with concrete in October 1994. |

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

| Site History: | One of three sites in a formal commingled plume account. The property was a service station from 1953 to 1998. In 1988, several feet of separate phase hydrocarbon ( free product ) was measured in a nearby monitoring well (MW-7) installed during a regional groundwater contamination investigation. A case was opened and in May 1989 a piping leak was discovered and repaired onsite. Elevated levels of fuel were found in soil samples collected during the piping replacement. After several phases of investigation the underground storage tanks and fueling equipment was removed in 1998 and the site was sold. In 2000 the site and two other gas stations (Baugh and Beacon, see above) entered into a commingled plume agreement and |

**BP / REDWOOD OIL #110 (Continued)** **S101304990**

began cleanup which ended in 2018. The site is now used as a jewelry store, though the fueling island canopy remains. Most of the wells associated with the 3 commingled plume sites were destroyed, but the majority of offsite wells installed for this site (including several vapor monitoring points) were transferred to an adjacent property owner with an open solvent contamination case (BSC Cleaners, (Geotracker ID SL0609776502) to avoid additional and unnecessary well installations.

| Site History: | This entry in Geotracker is not an actual Cleanup Program site, but rather a tool used historically as part of evaluating groundwater contamination in the area. Several sites are located within this area and are addressed as seperate case numbers. Oversight of groundwater contamination in this area is now through the individual site cases. |

| Site History: | Best Service Cleaners operated as a dry cleaner at the property from about 1953 to 1961. The site has been operated by several businesses since 1961 including A&W Root Beer, a delicatessen, a Chinese restaurant, and since 2002 has been the La Fondita Mexican restaurant. The present building has been remodeled and expanded from its original configuration, but it the structure that was originally used by BSC may have been razed prior to construction of the present building. Current property owner is applying for SCAP grant funding to assist with investigation efforts. |

CPS-SLIC:
Name: BEACON #489 (ULTRAMAR) / CO-MINGLED PLUME
Address: 921 SEBASTOPOL ROAD
City,State,Zip: SANTA ROSA, CA 95407
Region: STATE
**Facility Status:** **Completed - Case Closed**
Status Date: 06/02/2009
Global Id: SL0002012200
Lead Agency: NORTH COAST RWQCB (REGION 1)
Lead Agency Case Number: Not reported
Latitude: 38.4296898001949
Longitude: -122.730374336243
Case Type: Cleanup Program Site
Case Worker: ZZZ
Local Agency: Not reported
RB Case Number: 1NSO269
File Location: Regional Board
Potential Media Affected: Not reported
Potential Contaminants of Concern: * Petroleum - Automotive gasolines, * Semi-Volatile Organic Compounds, * Volatile Organic Compounds (VOC)
EPA Region: 9
Coordinate Source: Google Map Move
Cuf Case: Not reported
Quantity Released Gallons: Not reported
Begin Date: 06/01/1989
Leak Reported Date: 01/02/1965
How Discovered: Not reported
How Discovered Description: Not reported

| Military DOD Site: | No |
| Facility Project Subtype: | Not reported |
| RWQCB Region: | NORTH COAST RWQCB (REGION 1) |
| Site History: | The site is a former commercial dry cleaning facility that reportedly used a 1,000 gallon tank for storage of dry cleaning chemicals (Stoddard solvent and tetrachloroethylene or PCE). The tank was removed in 1987, and several groundwater monitoring wells installed and monitored. Stoddard solvent plume is well defined and stable, and would meet the Low Threat Underground Storage Tank Case Closure Policy if it was not comingled with a chlorinated solvent plume. Efforts now focused on the Site Cleanup Case opened for the chlorinated solvent plume.. |

| Site History: | The original dry-cleaning facility, New & Greater Paris Cleaners & Dyers Plant, was built in 1928 and operated in one form or another from 1928 until 1987. The original plant, located at 230 South A Street in the building east of the carport, used Stoddard solvent (a petroleum compound) in a 1,000-gallon underground storage tank (UST) for its dry-cleaning process. The dry-cleaning plant relocated to the adjacent address at 228 A Street and switched to using the chlorinated solvent tetrachloroethylene (PCE), likely in the 1950s. The property was also used at one point as an automotive service facility, though no records of this could be located. During this phase, the 1,000-gallon UST apparently was used to store waste oil. A separate UST case (1TSR255) was opened to cover petroleum hydrocarbon impacts from the UST. The UST case was closed in 2021. Work on the chlorinated solvent case is ongoing, and existing paper files going back as far as 1987 are being scanned and uploaded to this case. |

| Violation Date: | 03-18-2021 |
| Citation: | 2014-0057-DWQ - Industrial General Permit |
| Violation Description: | SW - Deficient BMP Implementation |
| Violation Notes: | BMP deficiencies were observed throughout the Facility. All advanced BMPs, including the existing bioswale, settling tanks, and settling pond, were full of turbid water that was overflowing and draining into a drop inlet. Source control is not effectively implemented to eliminate or reduce the level of TSS concentration in the Facility's run-off. |

Violation Description: SW - Enforcement Action
Violation Notes: Failure to meet the enhanced sampling and monitoring requirements in accordance with the CDO.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-24-2014
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Site now fully paved and graded to send most runoff towards two onsite settling ponds. Stockpiles of finer materials now covered with tarps prior to onset of significant rain events. New silos in process of final construction at time of inspection. All asphalt processes now reuse all blowdown wastes in future loads, thus eliminating large slurry storage area at rear of site. Suggestion was made to connect two settling ponds so that smaller storm runoff is fully contained in larger pond, thus avoiding any discharge to state waters. Site housekeeping is excellent, with site well swept and otherwise free of debris. Some updates of SWPPP were needed, especially in terms of site emergency contacts and onsite personnel dealing with stormwater.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-12-2020
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: A follow-up inspection was conducted to ensure that the adequate BMPs are in place prior to the wet season. Find the attached inspection report for more detail.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS,

Eval General Type: Compliance Evaluation Inspection

Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-27-2010
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Site inspection with student interns Bob Legge and Forest Fortescue. Met with site personnel Bill Reid and Josh Leask. Site has been regraded to pull runoff away from entrance and exit access. New concrete washout area installed near entrance that acts as settling pond for runoff from feedstock piles. Discharge from this pond enter vegetated swale prior to offisite discharge. Wet scrubber now replaced with filter bags, eliminating need to store and manage scrubber discharge. Wattled around all drop inlets. Site in excelent condition relative to water quality.

Completed Document Type: Site Screening
Completed Date: 03/25/2008
Comments: Soil cleanup was conducted and approved by the the Santa Rosa Fire Department and the North Coast Water Board on March 23 and March 30, 2005 respectively. Soil was contaminated with motor oil and lead. Groundwater results for volatile organic compounds and selected metals were below the Maximum Contaminant Levels (MCLs).

| Site History: | The McMinn Area is located in southwest Santa Rosa, primarily along Sebastopol Road between Stony Point Road and Dutton Avenue. In 1984, CalEPA and the Department of Toxic Substance Control established the McMinn Avenue Superfund Site to address reports of chemical contamination in domestic wells and of vapors in near the Roseland Elementary School. The Superfund designation was removed in 1992 after investigation allocated responsibility for the pollution to several individual releases and responsible parties-several sites are located within this area and are addressed as separate case numbers. |

**MCMINN AVENUE AREA (Continued)** **S118172381**

This McMinn Avenue area entry in Geotracker is not an actual Cleanup Program site, but rather a tool used historically as part of evaluating groundwater contamination in the area. Oversight of groundwater contamination in this area is now through the individual site cases. However, this Geotracker entry includes some historic documents under the site documents tab.

| Site History: | Petroleum contamiated soil was discovered when utility trenches were being excavated near the intersection of College and Cleaevland Avenues. The "vacant lot" property was identified as the site of a former gasoline station, prior to the widening of the roadways. Subsequent extensive geotecnical investiagtions conducted at the 103 College Avenue property on behalf of the City of Santa Rosa did not find an existing underground storage tank at the site. Groundwater at the site has been impacted by petroleum hydrocarbons. |

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Military DOD Site: No
Facility Project Subtype: Not reported
RWQCB Region: NORTH COAST RWQCB (REGION 1)
Site History: This site is a former wholesale fuel delivery and bus maintenance shop, and currently maintains and stores commercial vehicles. There were several above ground storage tanks (ASTs) installed in the 1940s, which are no longer on-site. In 1950 six fuel underground storage tanks (USTs) were installed, which were later removed in 1985. Contamination was reported in 1988. In 2001, a kerosene UST was also removed. Cleanup activities have included excavation and disposal of 7,800 cubic yards (>10,000 tons) of fuel impacted soil; pumping out 1.6 million gallons of contaminated groundwater; and the short-term use of both dual-phase extraction (DPE), and high-vacuum DPE (HVDPE) systems to remove over 10,000 pounds of fuel constituents from the soil. There were six monitoring wells (irregularly monitored since 1990) and 5 extraction wells both on- and off-site. Reviews conducted in 2019 and 2022 indicated the site was eligible for closure under the Low Threat Underground Storage Tank Case Closure Policy. The site was closed in November of 2021 after a well destruction report was received indicating that the last of the wells had been removed and that any remaining waste from those activities had been properly disposed of.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
Registry ID: 110071742019

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide

**SONNEN MOTORCARS (Continued)** **1000220394**

consistent regulatory activities for six state and federal environmental programs.
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

| Waste Type2: | Not reported |
| Waste2: | Stormwater Runoff |
| Primary Waste Type: | Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category. |
| Secondary Waste: | Not reported |
| Secondary Waste Type: | Not reported |
| Design Flow: | 0 |
| Baseline Flow: | 0 |
| Reclamation: | No reclamation requirements associated with this facility. |
| POTW: | The facility is not a POTW. |
| Treat To Water: | Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality. |
| Complexity: | Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds. |

CA BOND EXP. PLAN:

| | |
|---|---|
| Reponsible Party: | DETAILED SITE EXPENDITURE PLAN |
| Project Revenue Source Company: | Not reported |
| Project Revenue Source Addr: | Not reported |
| Project Revenue Source City,St,Zip: | Not reported |
| Project Revenue Source Desc: | Currently there are no identified responsible parties. Therefore, Bond funds will be used to investigate and remediate the site. If during the investigation RPs are identified, DHS will pursue appropriate cost recovery activities. This site is currently not on the NPL, nor does it appear to be a likely candidate for NPL listing in the near future. Therefore, it is unlikely that federal funds will become available for this site. |
| Site Description: | Ground water contamination in privately-owned wells has been discovered. The area where investigation activities have been focused is designated as the Local Study Area and is defined as the are within a 2000-foot radius of the intersection of McMinn Avenue and Sebastopol Road. More than 50 potential sources of contamination have been indentified, although responsible parties have not yet been identified. |
| Hazardous Waste Desc: | Initial sampling and analysis of water from private wells, conducted by the Sonoma County Public Health Department and Regional Water Quality Control Board, indicated ground water contaminated by fuels and associated compounds and solvents. Seven ofthirty eight private wells, which were sampled by DHS in the fall of 1986, were found to have concentrations of contaminants at or exceeding State drinking water action levels. Contaminants which were found to exceed State action levels include benzene, 1,2-dichloroethane (DCE), tetrachlorothene (TCE) and vinyl chloride. Fuels have been found floating in monitoring wells.ne, 1,2-dichloroethane (DCE), tetrachlorothene (TCE) and vinyl chloride. Fuels have been found floating in monitoring wells. |
| Threat To Public Health & Env: | The primary threat is from consumption of contaminated well water. Migration of ground water contaminants may result in the contamination of additional wells. |
| Site Activity Status: | The preliminary site assessment and investigation (PSAI) has been completed and the final report was issued in July, 1987. Soil gas sampling was conducted in August, 1987. Implementation of the first Phase of the RI started June, 1988. The work to be completed in this Phase includes drilling, installation and sampling of ground water monitoring wells, drilling stratigraphic boreholes and aquifer testing. Data generated will be used to identify sources of contamination and potential RPs and to determine the direction of future work. The RWQCB has completed underground tank investigations at several locations in the study area. |

| Site History: | In June of 1988, a former facility operator indicated that two underground storage tanks (USTs) had been used during the course of operations. During an attempt to remove the USTs in December 1988, backfill was encountered and no USTs were found. Groundwater sampling has revealed petroleum hydrocarbons at low levels or below detection limits. |

| Site History: | The site has been a hotel since 1971 that expanded in 1986 by acquiring adjacent land previously used for metal plating. This land included an underground storage tank (UST) and a parts-cleaning sump. Investigations from 1999 to 2024 identified chlorinated volatile organic compounds (CVOCs) contamination in the soil and groundwater, with elevated CVOCs detected beneath room #151 of the hotel. Although indoor air concentrations slightly exceeded screening levels, there is no significant health risk for hotel guests or workers. Concentrations of trichloroethylene (TCE), cis-1,2-dichlorethene (cis-1,2-DCE), trans1,2-dichlorethene (trans-1,2-DCE), 1,2-dichloroethane (1,2-DCA), and vinyl chloride are in groundwater at levels above water quality objectives (WQOs) but monitoring shows a stable and decreasing plume. These chemicals are expected to reach WQOs naturally within a reasonable timeframe with no threat to sensitive receptors. There is a land use covenant restricting site use (https://documents.geotracker.waterboards.ca.gov/regulators/deliverable_documents/6758686661/250325_KKH_Bromley_LUC_Final_Recorded.pdf.pdf), and a Soil, Soil Gas, and Groundwater Management Plan (https://documents.geotracker.waterboards.ca.gov/esi/uploads/geo_report/9992675423/T0609791166.PDF) in place for the site. |

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal NPL (Superfund) sites***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/26/2025

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/26/2025

Next Scheduled EDR Contact: 04/06/2026
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

Next Scheduled EDR Contact: 11/28/2011
Data Release Frequency: No Update Planned

***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/26/2025
Date Data Arrived at EDR: 01/05/2026

***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 09/22/2025

Next Scheduled EDR Contact: 04/06/2026
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 11/30/2025

***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 11/30/2025
Date Data Arrived at EDR: 12/03/2025
Date Made Active in Reports: 12/10/2025
Number of Days to Update: 7

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

***Lists of state- and tribal hazardous waste facilities***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 09/19/2025

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

Next Scheduled EDR Contact: 04/13/2026
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

**USGS TOPOGRAPHIC MAP**

| | |
|---|---|
| Target Property Map: | 50005667 SANTA ROSA, CA |
| Version Date: | 2021 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

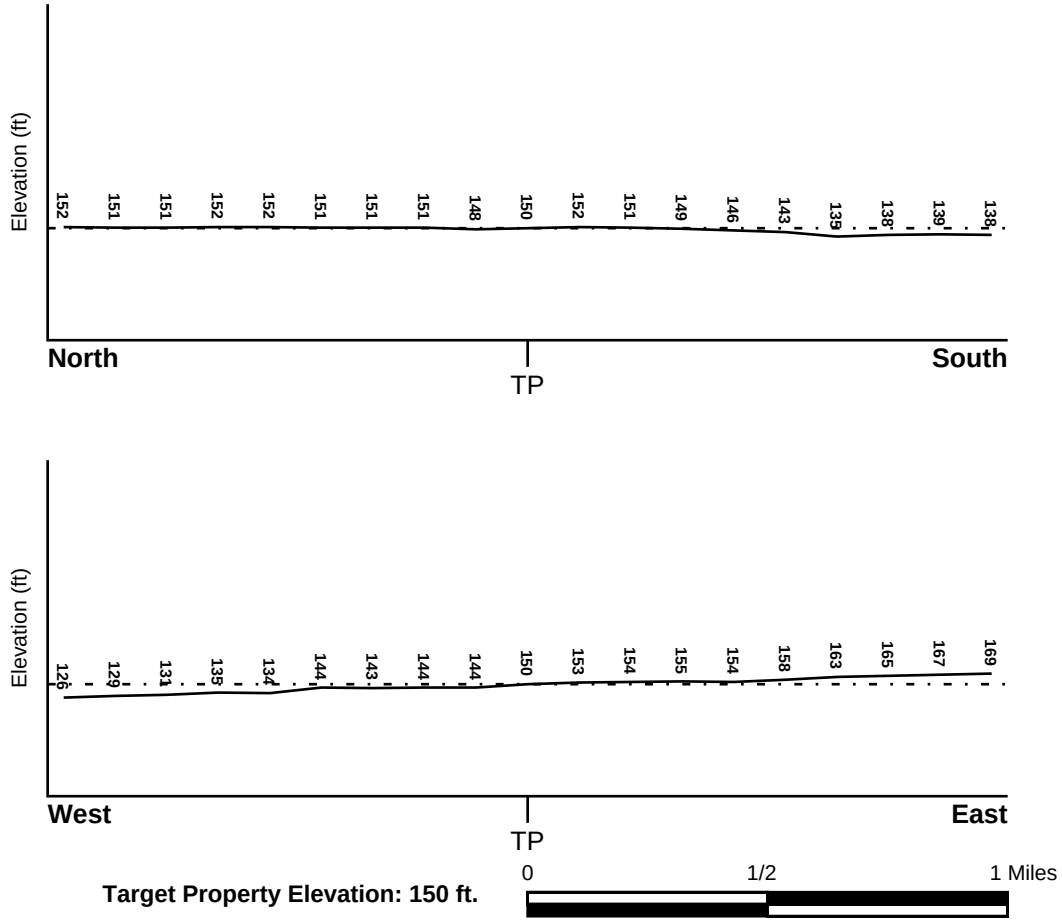

**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General West

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**FEMA FLOOD ZONE**

| Flood Plain Panel at Target Property | FEMA Source Type |
|---|---|
| 06097C0736F | FEMA FIRM Flood data |

| Additional Panels in search area: | FEMA Source Type |
|---|---|
| 0603810005B | FEMA Q3 Flood data |
| 06097C0729E | FEMA FIRM Flood data |
| 0603810010B | FEMA Q3 Flood data |
| 06097C0737F | FEMA FIRM Flood data |

**NATIONAL WETLAND INVENTORY**

| NWI Quad at Target Property | NWI Electronic Data Coverage |
|---|---|
| SANTA ROSA | YES - refer to the Overview Map and Detail Map |

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

***Site-Specific Hydrogeological Data*:***

| | |
|---|---|
| Search Radius: | 1.25 miles |
| Location Relative to TP: | 1/8 - 1/4 Mile SSE |
| Site Name: | Eltra Corp C & D Batteries Div |
| Site EPA ID Number: | CAD041651027 |
| Groundwater Flow Direction: | SW ON A REGIONAL BASIS. |
| Inferred Depth to Water: | 14 feet. |
| Hydraulic Connection: | Aquifer units within 125 feet of the ground surface appear to be hydraulically connected. |
| Sole Source Aquifer: | No information about a sole source aquifer is available |
| Data Quality: | Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s) |

**AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

---

**Soil Map ID: 1**

Soil Component Name: YOLO

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|---|---|---|---|---|---|---|---|
| | Boundary | | | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| Layer | Upper | Lower | Soil Texture Class | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 7 inches | loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 14.11 Min: 1 | Max: 8.4 Min: 6.1 |
| 2 | 7 inches | 59 inches | loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 14.11 Min: 1 | Max: 8.4 Min: 6.1 |

---

**Soil Map ID: 3**

Soil Component Name: RIVERWASH

Soil Surface Texture: very gravelly sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|---|---|---|---|---|---|---|---|
| | Boundary | | | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| Layer | Upper | Lower | Soil Texture Class | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 5 inches | very gravelly sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILIS, Gravels, Clean Gravels, Well-graded gravel. | Max: 141 Min: 42 | Max: Min: |
| 2 | 5 inches | 59 inches | stratified extremely gravelly coarse sand to gravelly sand | Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand. | COARSE-GRAINED SOILIS, Gravels, Clean Gravels, Well-graded gravel. | Max: 141 Min: 42 | Max: Min: |

---

**Soil Map ID: 4**

Soil Component Name: YOLO

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

**LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

**WELL SEARCH DISTANCE INFORMATION**

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

AQUIFLOW$^{R}$ Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

Orphan Well Prioritization Listing
California Department of Conservation
Telephone: 916-445-9686
Includes locations of wells included in the California State Well Plugging and Sealing Project, managed by CalGEM (California Geologic Energy Management Division).

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by EBA Engineering were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by EBA Engineering were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

# EXECUTIVE SUMMARY

## DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1930 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

## RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

## RESEARCH SUMMARY

## TARGET PROPERTY: ADDRESS NOT IDENTIFIED IN RESEARCH SOURCE

The following Target Property addresses were researched for this report, and the addresses were not identified in the research source.

| Address Researched | Address Not Identified in Research Source |
|---|---|
| Pierson Street | 2020, 2017, 2014, 2010, 2006, 2005, 2000, 1995, 1994, 1992, 1990, 1987, 1981, 1976, 1970, 1965, 1961, 1958, 1953, 1947, 1935, 1930 |

# APPENDIX H

# USER QUESTIONNAIRE

# USER QUESTIONNAIRE

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

**(1.) Environmental liens that are filed or recorded against the *property* (40 CFR 312.25).**
Did a search of *recorded land title records* (or judicial records where appropriate, identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law?

No environmental liens were identified. The project area is located within City of Santa Rosa public right-of-way along Pierson St.

**(2.) Activity and use limitations that are in place on the *property* or that have been filed or recorded against the *property* (40 CFR 312.26(a)(1)(v) and vi)).**
Did a search of *recorded land title records* identify any Activity or Use Limitations such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law?

No environmental activity or use limitations were identified. The project area is located within the public right-of-way intended for use as a public roadway and utility corridor.

**(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).**
Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business or property?

No.

**(4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).**

Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

No transaction is occurring. Project areas are within existing easements or public right-of-way owned by the City of Santa Rosa.

**(5.) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).**

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,

(a.) Do you know the past uses of the *property*?

No. Adjacent properties consist of residential housing and public streets (Pierson St, W 3rd St, W 6th St).

(b.) Do you know of specific chemicals that are present or once were present at the p*roperty*?

No.

(c.) Do you know of spills or other chemical releases that have taken place at the *property*?

No.

(d.) Do you know of any environmental cleanups that have taken place at the *property*?

No.

**(6.) The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).**

Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*?

No.

Signed_____ Date 2/9/2026

# APPENDIX I

# PROFESSIONAL QUALIFICATIONS

# Kevin Coker, Senior Environmental Scientist Environmental Services

| Qualifications | |
|---|---|
| Education | Sonoma State University, B.A., Environmental Studies & Planning/Hazardous Materials Management<br>CEQA Practitioner Training Program, University of California, Davis |
| Registrations | California Registered Environmental Assessor<br>OSHA 40 Hour Hazardous Waste Operations & Emergency Response Training<br>Association of Environmental Professionals |

Mr. Coker has over 25 years of experience in the field of environmental assessments and investigations, and various levels of property transfer and property development studies. Mr. Coker is experienced in many aspects of field investigations, including soil and groundwater investigations, *in-situ* remediation installation activities, underground storage tank (UST) removal and installation, over-excavation projects and other subsurface investigative and remedial projects, and regulatory permitting and compliance. Mr. Coker has performed over 300 Phase 1 Environmental Site Assessments (ESAs) in northern California, as well as CEQA- and NEPA-related environmental reviews. Mr. Coker is experienced in technical writing of Proposals/RFPs, work plans, summary reports and related technical documents.

At EBA Engineering, Mr. Coker is a Senior Environmental Scientist, responsible for a variety of projects including soil, groundwater and soil-vapor investigations, environmental assessments, property development and land-use permitting and associated studies, data evaluation and interpretation. Other responsibilities include the oversight of project budgets, client and regulatory agency interactions, site investigation activities and field and reporting programs.

**Related Experience**

- Phase I Environmental Site Assessments
- Phase II Environmental Site Investigations
- CEQA Initial Studies, Mitigated Negative Declarations/Negative Declarations
- NEPA Environmental Assessments
- Compliance monitoring including soil, groundwater, soil vapor and ambient air monitoring and sampling.
- Preparation of Work Plans for soil and groundwater investigations, hydrogeologic evaluations, corrective action plans, and closure documentation
- Oversee geologic and hydrogeologic investigations related to underground storage tanks and other chemical releases
- Field work, including environmental investigations requiring UST removal and over-excavations, soil and groundwater sampling and analysis, surface and storm water sampling and analysis

# David Noren, Vice President
## Environmental Services

Mr. Noren has over 30 years of experience in the field of environmental assessments and investigations. Prior experience includes technical and management services for a wide range of environmental, hydrogeologic, water rights assessment and reporting and solid waste landfill projects. The nature and scope of these projects have included field and management positions for property assessments, assessments of surface and subsurface geologic investigations, underground fuel storage tank investigations and remediation, hydrogeologic characterization investigations, remedial action design and implementation of soil, groundwater, and landfill gas corrective action programs and storm water management sampling and reporting.

At EBA Engineering, Mr. Noren is a Vice President of Environmental Services Division, and oversees a number of projects including site investigations and monitoring, environmental assessments, as well as providing technical support and management services for solid waste management projects. The management requirements include the oversight of project budgets, client interactions, site investigation activities and field and reporting programs.

Mr. Noren has experience in the application of numerous investigative and treatment methodologies in a wide range of geologic environments including performing the investigation and remediation of a diverse range of contaminated sites and municipal solid waste facilities.

| Qualifications | |
|---|---|
| Education | University of San Francisco, San Francisco - M.S. Environmental Management<br>University of California, Davis – B.S. Agricultural Science and Management |
| Registrations | California Registered Environmental Assessor<br>OSHA 40 Hour Hazardous Waste Operations & Emergency Response Training<br>OSHA 8 Hour Hazardous Waste Activities Management Training<br>Supervisor Training in Hazardous Waste Operations |
| Affiliations | SRJC Ag Trust Foundation<br>Sonoma County Farm Bureau Natural Resource Committee<br>Santa Rosa Plain Groundwater Sustainability Agency Advisory Committee |

### Related Experience

- Perform Phase I Environmental Site Assessments
- Perform Phase II Environmental Site Investigations
- Perform compliance monitoring including groundwater, leachate, and landfill gas sampling and analysis.
- Landfill gas sampling at several active and closed waste facilities for compliance with Bay Area Air Quality Management District Rule 8, Regulation 34 and Title 27 of the California Code of Regulations. Data collected is for site regulatory compliance and modeling purposes.
- Preparation of Work Plans for soil and groundwater investigations, hydrogeologic evaluations, corrective action plans, and closure documentation
- Manage and oversee geologic and hydrogeologic investigations related to underground storage tanks
- Water rights assessment, registration and reporting
- Field work, including environmental investigations requiring exploratory drilling, vadose monitoring, groundwater monitoring well installation and sampling, soil and groundwater sampling and analysis, surface and storm water sampling and analysis
