ROBLES TRUNK LINING PHASE I

CIP PROJECT NUMBER: C02114

Dear Residents:

The City of Santa Rosa is finalizing construction plans to make improvements to a sewer trunk line that goes through your property. This project consists of lining the sewer trunk with lining technologies that do not require trenching. The project is anticipated to start in June 2026 (see reverse for Project Limits).

Completion of this project is vital to the integrity of our community infrastructure. This project consists of relining the aged sewer line segments and rehabilitating the sewer manholes along the sewer line. Some of the benefits from this project include:

- Strengthening the life of the sewer trunk line to avoid having to dig and replace the entirety of the pipeline
- Significantly reducing the need for repairs, and reduce groundwater infiltration into the sewer system, which helps maintain the effectiveness of our Wastewater Treatment Plant
- Preventing future breaks and problems
- Reducing maintenance costs

Though temporary impacts to your property are inevitable, our goal is to improve our community infrastructure without creating any more disturbance than necessary. The Contractor will be advised that daily and weekly activities such as mail delivery and garbage service must continue during the project. Please feel free to contact me at (707) 543-3861 (or e-mail at LBishop@srcity.org) if you have any questions or concerns.

We will update you with another letter approximately two weeks prior to the start of construction. In addition to written communications like this, the City has created a special website where you can track the progress of this project. Simply go to www.srcity.org/CIP, view the map, and click on the blue map pin that corresponds to this project. You can also view the list of all Capital Improvement Program projects and find this project under Project ID No: 02114.

Sincerely,

LUCAS BISHOP
Assistant Engineer
